Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to: Energy Section, Industry Division, Statistics Canada, Ottawa, Ontario, KlA OT6 (telephone (613) 951-9823) or to the Statistics Canada Regional Reference Centre in:

| Halifax | (902) | 426-5331 | Regina | (306) | 780-5405 |
|----------|-------|----------|-----------|-------|----------|
| Montreal | (514) | 283-5725 | Edmonton | (403) | 495-3027 |
| Ottawa | (613) | 951-8116 | Calgary | (403) | 292-6717 |
| Toronto | (416) | 973-6586 | Vancouver | (604) | 666-3691 |
| Winnipeg | (204) | 983-4020 | | | |

You can also visit our World Wide Web site: http://www.statcan.ca

Toll-free access is provided **for all users who reside outside the local dialing area** of any of the Regional Reference Centres.

How to Order Publications

Statistics Canada publications may be purchased from local authorized agents and other community bookstores, the Statistics Canada Regional Reference Centres, or from:

Statistics Canada
Operations and Integration Division
Circulation Management
120 Parkdale Avenue
Ottawa, Ontario
K1A 0T6

Telephone: (613) 951-7277
Fax: (613) 951-1584
Toronto (credit card only): (416) 973-8018
Internet: order@statcan.ca

Standards of Service to the Public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and service to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à: Section de l'énergie, Division de l'industrie, Statistique Canada, Ottawa, Ontario, KlA OT6 (téléphone: (613) 951-9823) ou à l'un des centres de consultation régionaux de Statistique Canada:

| Halifax | (902) | 426-5331 | Regina | (306) | 780-5405 |

Note of appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

Note: Due to the nature of this publication the following standard symbols regularly used in Statistics Canada publications have been omitted.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Metric measures

TW.h. (terawatt hour) = Watt hour $\times 10^{12}$

GW.h. (gigawatt hour) = Watt hour x 109

MW.h. (megawatt hour) = Watt hour x 106

KW.h. (kilowatt hour) = Watt hour x 103

Acknowledgements

This publication was prepared under the direction of:

- · George Andrusiak, Director, Industry Division
- Robert Lussier, Assistant Director, Industry
 Division
- · Ron Rasia, Chief, Energy Section
- Serge Grenier, Unit Head, Energy Section (613) 951-3566

Signes conventionnels

Note: Due à la nature particulière de cette publication, les symboles ci-dessous, couramment employé par Statistique Canada, ont été omis.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Mesures métriques

TW.h (térawatt heure) = Watt heure x 1012

GW.h (gigawatt heure) = Watt heure x 109

MW.h (mégawatt heure) = Watt heure x 106

KW.h (kilowatt heure) = Watt heure $\times 10^3$

Remerciements

Cette publication a été rédigée sous la direction de:

- George Andrusiak, directeur, Division de l'industrie
- Robert Lussier, directeur-adjoint, Division
 de l'industrie
- · Ron Rasia, chef, Section de l'énergie
- Serge Grenier, chef d'unité, Section de l'énergie (613) 951-3566

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

Electricity Generation

In 1994, net electricity generation (total generation less energy used in generating station service) increased 4.6% to 539 442 GW.h. The increase was due to greater exports to the United States and stronger domestic demand in all parts of Canada except for the Northwest Territories. Of the total electricity generated, 488 522 GW.h was for use in Canada and the remaining 50 919 was exported. The electric power industry represents 2.6 per cent of Canada's Gross Domestic Product.

Hydro is the main source (61 per cent) of electricity generation in Canada. Hydro stations produced 326 434 GW.h, up 1.9% from 1993. Electricity generation from nuclear sources rose a strong 14.7% over 1993 to 101 710 GW.h. Nuclear power is the second most prevalent source of electricity in Canada, with 19% of total electricity generated.

Domestic demand for electricity (including self-generated electricity) rose 1.4 per cent to 495 527 GW.h in 1994. The main factor is the rise in industrial use, which is up 2.6 per cent to 197 967 GW.h. Residential use grew at a slower rate, rising only 0.4 per cent to 132 882 GW.h.

Sales

Total domestic sales of electricity to ultimate customers rose 1.6% in 1994 to 419 764 GW.h. Revenue received from sales totalled \$24,629 million, up 2.9% from 1993. As a means of comparison, the Consumer Price Index for electricity rose by 0.6 per cent during the same period.

Revenues for residential and agricultural sales are 7.13 cents per kilowatt-hour in 1994, up 0.7% from 1993. Revenues range from 5.45 cents per kilowatt-hour in Manitoba to 26.59 cents per kilowatt-hour in the Northwest Territories.

Financial Data

Operating revenues of electric utilities rose 3.1% in 1994 to \$33,586 million. Meanwhile, operating expenses decreased 0.4% to \$21,921 million. Net income totalled \$2,532 million in 1994, or 7.6% of operating revenues.

Faits saillants

Production d'électricité

En 1994, la production nette d'électricité (la production totale moins l'énergie utilisée pour l'entretien de la centrale) a augmenté de 4,6% pour se chiffrer à 539 442 GW.h. Cette augmentation provient d'une hausse des exportations vers les États-Unis ainsi qu'une plus forte demande intérieure à travers le Canada à l'exception des Territoires du Nord-Ouest. Sur la production totale d'électricité, 488 522 GW.h étaient destinés au Canada et le reste (50 919 GW.h) ont été exportées. L'industrie de l'énergie électrique représente 2,6% du produit intérieur brut du Canada.

Les ressources hydrauliques sont la principale source (61%) de la production d'électricité au Canada. Les centrales hydrauliques ont produit 326 434 GW.h, en hausse de 1,9% comparativement à 1993. La production d'électricité à partir de sources nucléaires a connu une forte hausse de 14,7% depuis 1993 pour atteindre 101 710 GW.h. L'énergie nucléaire est la deuxième principale source d'électricité au Canada, avec 19% de la production d'électricité.

La demande intérieure pour l'électricité (y compris l'électricité produite pour auto-consommation) a augmenté de 1,4% en 1994 pour totaliser 495 527 GW.h. La raison principale est la hausse de la demande pour usage industriel, qui est en hausse de 2,6%, atteignant 197 967 GW.h. La croissance a été moins forte du coté résidentiel, avec une hausse de seulement 0,4% pour totaliser 132 882 GW.h.

Ventes

Les ventes intérieures d'électricité aux abonnés ultimes ont augmenté de 1,6 en 1994 pour se chiffrer à 419 764 GW.h. Les recettes provenant des ventes étaient de 24 629 millions\$, en hausse de 2,9% comparativement à 1993. À titre de comparaison, l'Indice des prix à la consommation pour l'électricité a augmenté de 0,6% pendant la même période.

Les recettes des ventes aux secteurs résidentiel et agricole étaient de 7,13 cents par kilowatt-heure in 1994, en hausse de 0,7% en 1993. Les recettes vont de 5,45 cents par kilowatt-heure au Manitoba à 26,59 cents par kilowatt-heure dans les Territoires du Nord-Ouest.

Données financières

Les recettes d'exploitation des services d'électricité ont augmenté de 3,1% en 1994 pour atteindre 33 586 millions\$, tandis que les dépenses d'exploitation ont diminué de 0,4% pour totaliser 21 921 millions\$. Leur revenu net totalisait 2 532 millions\$ en 1994, ou 7,6% des recettes d'exploitation.

Total assets stood at \$142,252 million, up 2.5% from a year earlier. The current ratio (current assets over current liabilities) is unchanged from the previous year at 0.66. Long-term debt is 63.9 per cent of total assets, down from 65.1 per cent in 1993.

There were 76,459 persons employed by electric utilities in 1994, a decline of 6.7% from the previous year. Employment declined in all provinces and territories, mainly due to restructuring by major utilities. Wages and salaries followed the same pattern with a decline of 8.6 per cent for a total wage bill of \$4,017 million in 1994. Publicly operated utilities reported total wages and salaries of \$3,662 million, while private utilities reported \$355 million.

Cost of Fuels

Electric utilities reported expenditures of \$1,710 million on fuel for thermal electric plants in 1994, down 12.9% from a year earlier. The amount spent on petroleum products decreased 22.5% to \$234 million, while that on natural gas increased 24.4% to \$290 million. At the same time, expenditures on coal decreased 2.0% to \$982 million. Imports account for approximately one-quarter of the sum spent on coal.

It should be noted that the values presented above have been taken from Table 6. They may differ from values appearing in Table 8 due to collection period differences (e.g. table 6 is calendar year; table 8 is fiscal year) and accounting procedures (e.g. royalties paid on coal production are included in Table 6 but shown as a separate item in Table 8).

Generating Capacity

Total generating capacity in Canada at the end of 1994 reached 112 967 MW, a slight increase of 0.7% from the 1993 level of 112 205 MW. In 1994, utilities' generating capacity totalled 106 636 MW, while industry reported 6 606 MW. New additions totalled 762 MW in 1994, of which nuclear accounted for 577 MW.

For further information, refer to **Electric Power Statistics - Generating Stations**,
Catalogue no. 57-206-XPB.

L'actif était de 142 252 millions\$, en hausse de 2,5% comparativement à l'année précédante. Le ratio de liquidité générale (l'actif à court terme divisé par le passif à court terme) est resté inchangé à 0,66. La dette à long terme est l'équivalent de 63,9% de l'actif, une diminution du niveau de 65,1% en 1993.

Il y avait 76 459 personnes à l'emploi des services d'électricité en 1994, une diminution de 6,7% comparativement à l'annnée précédante. Le niveau d'empoi a baissé dans toutes les provinces ainsi que dans les territoires. Ceci s'explique en grande partie par la restructuration en cours des services les plus importants. Les traitements et salaires ont suivi la même tendance avec une baisse de 8,6% pour des dépenses en main d'oeuvre de 4 017 millions\$ en 1994. Les services publics d'électricité ont déclaré des salaires et traitements de 3 662 millions\$, tandis que les services privés ont déclaré un montant de 355 millions\$.

Coût des combustibles

Les services d'électricité ont déclaré des dépenses de 1 710 millions\$ en combustibles pour leurs centrales thermiques en 1994, en baisse de 12,9% comparativement à l'année précédante. La somme dépensée pour les produits du pétrole a diminué de 22,5% pour atteindre 234 millions\$, tandis que les dépenses en gaz naturel sont en hausse de 24,4% pour se chiffrer à 290 millions\$. Pendant la même période, les dépenses en charbon ont baissé de 2,0% pour atteindre 982 millions\$. les importations représentent environ un quart des achats de charbon.

Il est à noter que les valeurs présentées ci-dessus sont tirées du tableau 6. Elles peuvent varier par rapport à celles du tableau 8, en raison des différences dans la période de collecte des données (ex.le tableau 6 est fondé sur l'année civile et le tableau 8, sur l'année fiscale) et des procédures comptables (ex., les royautés payées sur la production de charbon sont incluses dans le tableau 6, mais sont considérées séparément dans le tableau 8).

Puissance génératrice

La puissance génératrice totale du Canada à la fin de 1994 était de 112 967 MW, soit une légère hausse de 0,7% de plus que les 112 205 MW en 1993. En 1994, la puissance génératrice des services a totalisé 106 636 MW, alors que la production de l'industrie s'est établie à 6 606 MW. En 1994, les nouvelles additions ont totalisé 762 MW, dont 577 MW pour les centrales à vapeur classique.

Pour en savoir plus, consulter la publication Statistique de l'énergie électrique - Centrales (no 57-206-XPB au catalogue).

- Table 3 has undergone two major changes since 1986.
- (a) The first of these involves the amount of energy received by industrial generaters from utilities. In past years all receipts were recorded, but starting in 1986 only those receipts necessary to fulfil outside commitments are shown. Consequently, the line "Used by producers" has been greatly reduced as it represents only that energy "used" from own production. This reduction is balanced by an equal increase in utility sales to mining and manufacturing. Table 10 is not affected.
- (b) The consumption categories employed in this publication do not equate with the rate structures of the utilities. Respondents have been requested to classify their customers according to these consumption categories. Because of the ondoing nature of the task of upgrading the accuracy of this classification, there may be a certain lack of uniformity in these statistical series through time.
- Nova Scotia Power Corporation (NSPC) commenced operation as an investor owned utility on August 13, 1992. Prior to this date, NSPC was a provincial Crown corporation (i.e. public utility). This ownership change has an impact on the data presented in Tables 5, 7, 8, and 9.

- Le tableau 3 a encouru deux changements majeurs depuis 1986.
- (a) Le premier changement concerne le montant d'énergie reçu par les producteurs "industriel" en provenance des producteurs dits "de services". Par le passé, toutes les réceptions étaient enregistrées, mais commençant en 1986, seulement les réceptions récessaires à remplir les engagements extérieurs sont rapportées. Conséquemment, la ligne "Utilisés par les producteurs" a été grandement réduite car elle représente seulement l'énergie "utilisé" provenant de sa propre production. Cette réduction est balancée par une augmentation égale dans les ventes des producteurs dit "de services" aux secteurs miniers et manufacturiers. Le tableau 10 n'est pas touché.
- (b) Les catégories de consommateurs employées dans cette publication ne correspondent pas avec la structure de tarification des distributeurs d'électricité. Il a été demandé aux répondants, de classifier leurs clients selon les catégories de consommateurs présentées. À cause des revisions en cours afin d'améliorer la précision de cette classification, il peut y avoir quelques problèmes de consistance dans certaines séries chronologiques.
- Nova Scotia Power Corporation (NSPC) a débuté ses opérations comme producteur investisseur propriétaire le 13 août 1992.
 Avant cette date, NSPC était une corporation provinciale de la Couronne (c.-a.-d. un service public). Ce changement a un impact sur les tableaux 5, 7, 8 et 9.

Data Methodology and Quality

This publication presents annual commodity and operating statistics on the Electric Utility Industry in Canada (SIC 491 of the Standard Industrial Classification, Catalogue 12-501). For completeness, the report also provides power generation of industrial establishments with generating facilities.

Statistics on the supply and disposition of electric energy are compiled from a quarterly survey of all power producers in Canada (approximately 200 producers operating some 900 stations). The response rate for the survey is very high — over 98%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data. Exports and imports information are obtained from the National Energy Board.

Financial and operating statistics are compiled from an annual survey of all electric utilities in Canada. Response rate is 100% and as a consequence no estimation is required and no bias resulting from non-response is introduced.

Installed generating capacity data are obtained from an annual survey of electric utilities and industrial establishments which have at least one plant with total generating capacity of over 500 KW. The survey covers some 900 generating stations. For additional information, refer to Electric Power Statistics - Generating Stations, Catalogue 57-206.

Data published in this report are subject to a certain degree of error, be it in differences in the interpretation of the questions, or mistakes introduced during processing. Reasonable efforts are made to ensure these errors are kept within acceptable limits through careful questionnaire design, liaison with major respondents, editing of data for inconsistencies and subsequent follow-up and quality control of manual processing operations. Historically, experience has indicated that the data rarely contain a serious error.

Méthodologie et qualité des données

La présente publication renferme des statistiques annuelles sur les produits et l'exploitation de l'industrie de l'énergie électrique au Canada (CTI 491 de la Classification type des industries, no 12-501 au catalogue). Pour compléter ces statistiques, on trouve également dans la publication des données sur la production d'énergie des établissements industriels qui ont des réseaux de production.

Les statistiques sur la disponibilité et l'écoulement de l'énergie électrique proviennent d'une enquête trimestrielle menée auprès de tous les producteurs d'électricité au Canada (environ 200 producteurs qui exploitent approximativement 900 centrales). Le taux de réponse à cette enquête est très élevé - s'établissant à plus de 98%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse. Les données ayant trait aux exportations et aux importations proviennent de l'Office national de l'énergie.

Les statistiques financières et d'exploitation sont tirées d'une enquête annuelle menée auprès de l'ensemble des entreprises publiques de production d'électricité au Canada. Le taux de réponse étant de 100%, il n'est pas nécessaire de procéder à une estimation et il n'existe pas de distorsion découlant de la non-réponse.

Les données relatives à la puissance génératrice installée proviennent d'une enquête annuelle sur les entreprises publiques de production d'électricité et les établissements industriels qui possèdent au moins une usine et dont la capacité de production globale dépasse 500 kW. L'enquête est menée auprès d'environ 900 centrales d'électricité. Pour obtenir d'autres renseignements, consultez la publication Statistiques de l'énergie électrique Centrales, no 57-206 au catalogue.

Les données diffusées dans la présente publication ne sont pas dépourvues d'un certain degré d'erreur, qu'il s'agisse d'écarts au niveau de l'interprétation des questions ou d'erreurs introduites en cours de traitement. Nous faisons des efforts raisonnables pour garantir que ces erreurs ne dépassent pas certaines limites acceptables, c'est-à-dire que nous soignons la conception du questionnaire, établissons la liaison avec les principaux répondants, vérifions les données pour en relever les incohérences et assurons le suivi subséquent et le contrôle de la qualité des opérations de traitement manuel. Selon notre expérience, les données contiennent rarement une erreur grave.

Glossary of Terms

Capability: The maximum that a station or equipment is capable of carrying under specific conditions.

Capacity: In the electric power industry, capacity has two meanings:

- System Capacity: The maximum power capability of a system. For example, a utility system might have a rated capacity of 5000 megawatts, or might sell 50 megawatts of capacity (i.e. of power).
- Equipment Capacity: The maximum power capability of a piece of equipment. For example, a generating unit might have a rated capacity of 50 megawatts.

Cogeneration: The combined production of electricity and useful heat. Cogeneration is often employed at industrial plants where the heat produced can be utilized in the manufacturing processes and for general space heating.

Conventional Generation: Electricity that is produced at a generating station where the prime movers are driven by gases or steam produced by burning fossil fuels.

Electric Utility: An organization that, as its prime purpose, generates, transmits and/or distributes electric energy for sale.

Firm Energy or Power: Electrical energy or power intended to be available at all times during the period of the agreement of its sale.

Grid: A network of electric power lines and connections.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water.

Installed Capacity: The capacity measured at the output terminals of all generating units in a station, without deducting station service requirements.

Interruptible Energy or Power: Energy or power made available under an agreement that permits curtailment or interruption of delivery at the option of the supplier.

Kilowatt (KW): The commercial unit of electric power; 1000 watts. A kilowatt can best be visualized as the total amount of power needed to light ten 100-watt light bulbs.

Glossaire des termes

Rendement optimum: Le niveau maximal d'électricité qu'une centrale ou un équipement est capable de transporter dans des conditions particulières.

Capacité: Dans l'industrie de l'énergie électrique, ce terme a deux significations:

- Puissance du réseau: La capacité maximale de livraison d'énergie d'un réseau. Par exemple, un service d'électricité peut avoir une capacité nominale de 5 000 mégawatts, ou encore il peut vendre 50 mégawatts de capacité (c.-à-d. de puissance)
- 2. La puissance de transport de l'équipement: La capacité maximale de puissance qu'une certaine pièce de matériel est capable de transporter. Par exemple, un groupe de production d'électricité pourrait avoir une capacité nominale de 50 mégawatts.

Cogénération: Production combinée d'électricité et d'énergie thermique. La cogénération est souvent utilisée dans les usines où l'énergie thermique produite peut servir dans le contexte des processus de fabrication et pour chauffer les locaux.

Production classique: Électricité d'une centrale où la force motrice est de la vapeur d'eau ou des gaz d'échappement produits à partir de combustibles fossiles.

Entreprise publique de production d'électricité: Organisme dont l'objet principal est de produire, transmettre et(ou) distribuer de l'énergie électrique à vendre.

Puissance garantie: Puissance électrique disponible à tout moment pendant la période de l'entente.

Réseau: Réseau de conducteurs et de connections.

Energie hydro-électrique: Production d'électricité à partir de l'énergie kinétique d'une chute d'eau.

Capacité installée: La capacité mesurée aux bornes de sortie de tous les groupes électriques d'une centrale, sans déduction des besoins de services de celle-ci.

Energie interruptible: 'Énergie disponible en vertu d'une entente qui autorise la diminution ou l'interruption de la livraison au gré du fournisseur.

Kilowatt (KW): Unité commerciale d'électricité égalant 1 000 watts, soit la quantité d'énergie requise pour allumer dix ampoules électriques de 100 watts.

Kilowatt Hour (KN.h): The commercial unit of electric energy; 1000 watt hours. A kilowatt hour can best be visualized as the amount of electricity consumed by ten 100-watt light bulbs burning for an hour. One kilowatt hour is equal to 3.6 million joules.

Load: The amount of electric power or energy consumed by a particular customer or group of customers.

Load Factor: The ratio of the average load during a designed period to the peak or maximum load in that same period. (Usually expressed in per cent.)

Megawatt (MW): A unit of bulk power; 1000 kilowatts.

Megawatt Hour (MW.h): A unit of bulk energy; 1000 kilowatt hours.

Nuclear Power: Electricity generated at a electric power plant whose turbines are driven by steam generation in a reactor by heat from the fission of nuclear fuel.

Peak Demand: The maximum power demand registered by a customer or a group of customers or a system in a stated period of time such as a month or a year. The value may be the maximum instantaneous load or more, usually the average load over a designated interval of time, such as one hour, and is normally stated in kilowatts or megawatts.

Reserve Generating Capacity: The extra generating capacity required on any power system over and above the expected peak load. Such a reserve is required mainly for two reasons: (1) in case of an unexpected breakown of generating equipment; (2) in case the actual peak load is higher than forecast.

Winter Peak: The highest load on a power system during the six-month period October to March. The winter peak almost always occurs in January or early February.

Kilowattheure (kW.h): Unité commerciale d'énergie électrique égalant 1 000 wattheures, soit la quantité d'électricité consommée par dix ampoules électriques de 100 watts pendant une heure. Un kilowattheure est égal à 3,6 millions de joules.

Charge: Quantité de puissance ou d'énergie électrique consommée par un client particulier ou un groupe de clients.

Facteur de charge: Coefficient de la charge moyenne pendant une période donnée sur la charge de pointe maximale au cours de la même période (habituellement exprimée en pourcentage).

Mégawatt (MW): Unité de puissance égale à 1 000 kilowatts.

Mégawattheure (MN.h): Unité de puissance égale à 1 000 kilowattheures.

Energie nucléaire: Électricité produite dans une centrale électrique où la valeur actionnant les turbines provient de la chaleur dégagée par la fission atomique.

Demande de pointe: Charge maximale consommée par un client, un groupe de clients ou un réseau pendant une période fixe, par exemple un mois ou un an. Il peut s'agir de la charge maximale installée ou, de façon plus habituelle, de la charge moyenne sur un intervalle court, une heure par exemple. Exprimée normalement en kilowatts ou en mégawatts.

Capacité génératrice de réserve: Capacité supplémentaire requise dans un réseau d'électricité, en sus de la charge de pointe prévue. Une telle réserve est requise pour deux raisons principales: (1) en cas de panne imprévue du matériel électrogène; (2) au cas où la charge de pointe réelle serait supérieure aux prévisions.

Pointe de consommation hivernale: S'entend de la plus forte charge qu'un système d'énergie doit assumer pendant la période de six mois allant d'octobre à mars. La pointe de consommation hivernale survient presque toujours en janvier ou au début de février.

Pick a topic...
any topic

The 1994 Statistics Canada Catalogue is your guide to the most complete collection of facts and figures on Canada's changing business, social and economic environment. No matter what you need to know, the Catalogue will point you in the right direction.

From the most popular topics of the day – like employment, income, trade, and education – to specific research studies – like mineral products shipped from Canadian ports and criminal victimization in urban areas – you'll find it all here.

... the 1994 Statistics Canada Catalogue will help you get your bearings...

The Catalogue puts all this information at your fingertips. With the expanded index, you can search by subject, author or title – even periodical articles are indexed. There's also a separate index for all our electronic products.

The **Catalogue** has everything you need to access all Statistics Canada's products:

- descriptions of over 25 new titles, plus succinct abstracts of the over 650 titles and 7 map series already produced;
- a complete guide to finding and using statistics;
- electronic products in a variety of media, and

advice on getting expert assistance on electronic products and on-line searches;

tabs to each section -- so you can immediately flip to the information you need.

... time and time again

To make sure that the **Catalogue** stands up to frequent use, we used a specially coated cover to prevent broken spines, tattered edges and dog-eared corners.

Order today – you'll be lost without it.

1994 Statistics Canada Catalogue

Only \$15 (plus GST and applicable PST) in Canada (US\$18 in the U.S. and US\$21 in other countries). Quote Cat. no. 11-2040XPE.

Le Catalogue de Statistique
Canada 1994 est votre guide pour
la collection la plus complète de
faits et de chiffres dans les
domaines, en constante évolution,
du commerce, de la société et de
l'économie du Canada. Peu importe
ce que vous voulez savoir, le
Catalogue vous mettra sur la
bonne piste.

Des sujets actuels les plus populaires – comme l'emploi, le revenu, le commerce et l'éducation – à des études de recherche spécialisées – comme les produits minéraux expédiés des ports canadiens et la victimisation dans les régions urbaines –vous trouverez tout dans ce document.

Le Catalogue de Statistique Canada 1994 vous aidera à vous orienter...

Le **Catalogue** vous met tous ces renseignements sous la main.
L'index augmenté vous permet de chercher par sujet, auteur ou titre—les articles de périodiques sont même indexés. On a aussi ajouté un index séparé pour tous nos produits électroniques.

Le **Catalogue** a tout ce qu'il vous faut pour vous procurer les produits de Statistique Canada:

- descriptions de plus de 25 nouveaux titres et courts résumés des 650 titres et plus et des 7 séries de cartes déjà disponibles;
- guide complet pour obtenir et utiliser les données statistiques;
- produits électroniques sur supports divers et conseils sur l'obtention d'αide d'experts pour

système d'onglets pour chaque section - pour que vous puissiez immédiatement repérer les renseignements qui vous intéressent.

...maintes et maintes fois

Pour garantir que le **Catalogue** puisse résister à une utilisation fréquente, nous avons utilisé une couverture avec un revêtement spécial conçue pour éviter les dos cassés, les bords abîmés et les coins de page pliés.

Commandez aujourd'hui – vous ne pourrez plus vous en passer.

re you getting your information on the Canadian economy "first-hand"?

Chances are, you spend hours reading several newspapers and a handful of magazines trying to get the whole economic picture — only to spend even more time weeding out fiction from fact! Wouldn't it be a great deal more convenient (and much more effective) to go straight to the source?

Join the thousands of successful Canadian decision-makers who turn to Statistic Canada's *Canadian Economic Observer* for their monthly briefing. <u>Loaded with first-hand information</u>, <u>collectively published nowhere else</u>, CEO is a quick, concise and panoramic overview of the Canadian economy. Its reliability and completeness are without equal.

single source

Consultations with our many readers – financial analysts, planners, economists and business leaders – have contributed to CEO's present, widely-acclaimed, two-part format. The **Analysis Section** includes thought-provoking commentary on current economic conditions, issues, trends and developments. The **Statistical Summary** contains the complete range of hard numbers on critical economic indicators: markets, prices, trade, demographics, unemployment and more.

More practical, straightforward and user-friendly than ever before, the *Canadian Economic Observer* gives you more than 150 pages of in-depth information in one indispensable source.

Why purchase CEO?

As a subscriber, you'll be <u>directly connected</u> to Statistics Canada's economic analysts – names and phone numbers are listed with articles and features. You'll also receive a copy of CEO's annual **Historical Statistical Supplement** – at no additional cost.

So why wait for others to publish Statistics Canada's data secondhand when you can have it straight from the source? Order your subscription to the *Canadian Economic Observer* today.

The *Canadian Economic Observer* (catalogue no. 10-2300XPB) is \$220 (plus GST and applicable PST) annually in Canada, US\$260 in the United States and US\$310 in other countries.

Highlights of the *Canadian Composite Leading Indicator* (catalogue no. 11F0008XFE) are available by fax – the same day of release – for \$70 annually in Canada and US\$70 in the United States.

To order, write to: Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication. If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and use your VISA or MasterCard. Via Internet: order@statcan.ca

Recevez-vous directement vos informations sur l'économie canadienne?

Il est probable que vous passez des heures à lire plusieurs journaux et un paquet de revues pour essayer d'avoir une vue complète de la situation économique, et ensuite passer encore plus de temps à séparer le réel de ce qui ne l'est pas. Ne serait-il pas plus pratique (et beaucoup plus efficace) de remonter directement à la source?

Joignez-vous aux milliers de décideurs canadiens gagnants qui lisent L'Observateur économique canadien pour leur séance de rapport mensuelle. Rempli de renseignements disponibles nulle part ailleurs, L'OEC permet d'avoir une vue générale rapide et concise de l'économie canadienne. Il est inégalé par sa fiabilité et son exhaustivité.

Ine seule source

Les consultations que nous avons eues avec nos nombreux lecteurs, des analystes financiers, des planificateurs, des économistes et des chefs d'entreprise, nous ont permis de présenter L'OEC dans son format actuel en deux parties, qui a été bien accueilli. La section de l'analyse contient des commentaires qui donnent à réfléchir sur la conjoncture économique, ses problèmes, ses tendances et ses développements. L'aperçu statistique contient l'ensemble complet des chiffres réels pour les indicateurs économiques essentiels : les marchés, les prix, le commerce, la démographie, le chômage, et bien d'autres encore.

Plus pratique, plus simple, plus facile à utiliser qu'auparavant, L'Observateur économique canadien vous offre plus de 150 pages de renseignements poussés sous une seule couverture.

ourquoi acheter L'OEC?

En tant qu'abonné à L'OEC, vous êtes <u>directement relié</u> aux analystes économiques de Statistique Canada : des noms et des numéros de téléphone sont cités dans les articles et les rubriques. Vous recevrez également un exemplaire du **Supplément statistique historique** annuel à titre gracieux.

Pourquoi devez-vous donc attendre que d'autres publient les données de Statistique Canada qu'ils ont reprises alors que vous pouvez les obtenir directement à la source? Abonnez-vous à *L'Observateur* économique canadien dès aujourd'hui.

Le prix de l'abonnement annuel à *L'Observateur économique canadien* (n° 10-2300XPB au catalogue) est de 220 \$ (plus la TPS et la TVP en vigueur) au Canada, de 260 \$ US aux États-Unis et de 310 \$ US dans les autres pays. Les faits saillants de l'*Indicateur composite avancé* (n° 11F0008XFF au catalogue) sont offerts par télécopieur – le jour même de leur parution – pour 70 \$ par année au Canada et 70 \$ US aux États-Unis.

Pour commander, écrivez à : Statistique Canada, Division des Opérations et de l'intégration, Direction de la circulation, 120, av. Parkdale, Ottawa (Ontario) K1A 0T6, ou adressez-vous au Centre de consultation de Statistique Canada le plus proche de chez vous et dont la liste figure dans cette publication. Si vous le préférez, vous pouvez envoyer votre commande par télécopieur au 1-613-951-1584, ou téléphoner sans frais au 1-800-267-6677 et utiliser votre carte VISA ou MasterCard. Data in Many Forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to: Energy Section, Manufacturing, Construction & Energy Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone (613) 951-9823) or to the Statistics Canada Regional Reference Centre in:

Ordering/Subscription information

All prices exclude sales tax

A paper version, catalogue no. 57-202-XPB is published annually for \$30.00 per issue in Canada. Outside Canada the cost is US \$30.00 per issue.

Please send orders to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa Ontario, K1A 0T6 or by dialing (613) 951-7277 or 1 800 700-1033, by fax (613) 951-1584 or 1 800 889-9734 or by Internet: order@statcan.ca. For change of address, please provide both old and new addresses. Statistics Canada publications may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

Standards of Service to the Public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à: Section de l'énergie, Division de la fabrication, de la construction et de l'énergie, Statistique Canada, Ottawa, Ontario, K1A OT6 téléphone: (613) 951-9823) ou à l'un des centres de consultation régionaux de Statistique Canada:

Renseignements sur les commandes/abonnements

Les prix n'incluent pas la taxe de vente

Une version papier, nº 57-202-XPB au catalogue, est publiée annuellement au coût de 30 \$ le numéro au Canada. À l'extérieur du Canada, le coût est de 30 \$ US le numéro.

Faites parvenir votre commande à Statistique Canada, Division des opérations et de l'intégration, Gestion de la circulation, 120, avenue Parkdale, Ottawa(Ontario) K1A 0T6 ou téléphonez au (613) 951-7277 ou 1 800 700-1033, par télécopieur au (613) 951-1584 ou 1 800 889-9734 ou via l'Internet à: order@statcan.ca. Pour changement d'adresse veuillez fournir votre ancienne et nouvelle adresse. On peut aussi se procurer les publications de Statistique Canada auprès des agents autorisés, des librairies locales et des bureaux locaux de Statistique Canada.

Normes de service au public

Statistique Canada s'engage à fournir à ses clients des services rapides, fiables et courtois et dans la langue officielle de leur choix. À cet égard, notre organisme s'est doté de normes de service à la clientèle qui doivent être observées par les Pour employés lorsqu'ils offrent des services à la clientèle. obtenir une copie de ces normes de service, veuillez communiquer avec le centre de consultation régional de Statistique Canada le plus près de chez vous

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

Note: Due to the nature of this publication the following standard symbols regularly used in Statistics Canada publications have been omitted.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Metric measures

TW.h. (terawatt hour) = Watt hour \times 10¹² GW.h. (gigawatt hour) = Watt hour \times 10⁹ MW.h. (megawatt hour) = Watt hour \times 10⁶

KW.h. (kilowatt hour) = Watt hour \times 10³

Acknowledgements

This publication was prepared under the direction of:

- George Andrusiak, Director, Manufacturing, Construction & Energy Division
- Vacant, Assistant Director, Manufacturing, Construction & Energy Division
- Ron Rasia, Chief, Energy Section
- Serge Grenier, Unit Head, Energy Section (613) 951-3566

Signes conventionnels

Note: Due à la nature particulière de cette publication, les symboles ci-dessous, couramment employé par Statistique Canada, ont été omis.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Mesures métriques

TW.h (térawatt heure) = Watt heure x 10¹²

GW.h (gigawatt heure) = Watt heure x 10⁹

MW.h (mégawatt heure) = Watt heure x 10⁶

KW.h (kilowatt heure) = Watt heure x 10³

Remerciements

Cette publication a été rédigée sous la direction de:

- George Andrusiak, directeur, Division de la fabrication, de la construction et de l'énergie
- Vacant, directeur-adjoint, Division de la fabrication, de la construction et de l'énergie
- Ron Rasia, chef, Section de l'énergie
- Serge Grenier, chef d'unité, Section de l'énergie (613) 951-3566

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

Electricity Generation

In 1995, net electricity generation (total generation less energy used in generating station service) increased 0.7% to 543 471 GW.h. Lower exports almost entirely compensated for the increase in generation to meet higher domestic demand. Of the total electricity generated, 500 027 GW.h was for use in Canada, an increase of 2.4% from 1994. The remaining 43 444 GW.h was exported, a decline of 14.7% from the previous year. The electric power industry represents 2.6 per cent of Canada's Gross Domestic Product.

Hydro is the main source (61 per cent) of electricity generation in Canada. Hydro stations produced 332 333 GW.h, up 1.8% from 1994. Electricity generation from nuclear sources declined 9.2% from 1994 to 92 306 GW.h due to extended shutdowns of nuclear capacity on Ontario and New Brunswick. This was prtially compensated by a 3.7% increase in production from conventional steam plants, which became the second most important source of electricity in Canada in 1995.

Domestic demand for electricity (including self-generated electricity) rose 2.4 per cent to 507 449 GW.h in 1995. The main factor is the rise in industrial use, which is up 3.6 per cent to 205 100 GW.h. Residential use declined 1.0 per cent to 131 610 GW.h.

Sales

Total domestic sales of electricity to ultimate customers rose 1.9% in 1995 to 427 923 GW.h. Revenue received from sales totalled \$25,106 million, up 1.9% from 1994. As a means of comparison, the Consumer Price Index for electricity fell by 0.4 per cent during the same period.

Revenues for residential and agricultural sales are 7.23 cents per kilowatt-hour in 1995, up 1.3% from 1994. Revenues range from 5.50 cents per kilowatt-hour in Manitoba to 26.30 cents per kilowatt-hour in the Northwest Territories.

Financial Data

Operating revenues of electric utilities rose 2.9% in 1995 to \$34,556 million. Meanwhile, operating expenses increased 4.3% to \$22,857 million. Net income totalled \$2,242 million in 1995, down 11.5 per cent from 1994. Net income represented 6.5 per cent of operating revenues.

Faits saillants

Production d'électricité

En 1995, la production nette d'électricité (la production totale moins l'énergie utilisée pour l'entretien de la centrale) a augmenté de 0,7% pour se chiffrer à 543 471 GW.h. De plus faibles exportations ont presqu'entièrement compensé pour une hausse de la production dûe à une plus forte demande interne. Sur la production totale d'électricité 500 027 GW.h étaient destinés au Canada, en hausse de 2,4% comparativement à 1994. Les autres 43 444 GW.h ont été exportées, en baisse de 14,7% relativement à l'année précédante. L'industrie de l'énergie électrique représent 2,6% du produit intérieur brut du Canada.

Les ressources hydrauliques sont la principale source (61%) de la production d'électricité au Canada. Les centrales hydrauliques ont produit 332 333 GW.h, en hausse de 1,8% comparativement à 1994. La production d'électricité à partir de sources nucléaires a chuté de 9,2% depuis 1994 pour atteindre 92 306 GW.h. à cause de fermetures prolongées de la capacité nucléaire de l'Ontario et du Nouveau-Brunswick. Ceci fut compensé partiellement par une hausse de 3,7% de la production des centrales à vapour , qui sont devenues la deuxième source en importance d'électricité au Canada en 1995.

La demande intérieure pour l'électricité (y compris l'électricité produite pour auto-consommation) a augmenté de 2,4% en 1995 pour totaliser 507 449 GW.h. Une hausse de 3,6% de la demande pour usage industriel à 205 100 GW.h est la raison principale pour cette augementation. Le côté résidentiel a connu une baisse de 1,0% pour totaliser 131 610 GW.h

Ventes

Les ventes intérieures d'électricité aux abonnés ultimes ont augmenté de 1,9% en 1995 pour se chiffrer à 427 923 GW.h. Les recettes provenant des ventes étaient de 25 106 millions\$, en hausse de 1,9% comparativement à 1994. À titre de comparaison, l'Indice des prix à la consommation pour l'électricité a diminué a 0,4% pendant la même période.

Les recettes des ventes aux secteurs résidentiel et agricole étaient de 7,23 cents par kilowatt-heure en 1995, en hausse de 1,3% en 1994. Les recettes vont de 5,50 cents par kilowatt-heure au Manitoba à 26,30 cents par kilowatt-heure dans les Territoires du Nord-Ouest.

Données financières

Les recettes d'exploitation des services d'électricité ont augmenté de 2,9% en 1995 pour atteindre 34 556 millions\$, tandis que les dépenses d'exploitation ont augmenté de 4,3% pour totaliser 22 857 millions\$. Leur revenu net totalisait 2 242 millions\$ en 1995, en hausse de 11,5% comparativement à 1994. Le revenu net représentait 6,5% des recettes d'exploitation.

Total assets stood at \$142,870 million, up 0.4% from a year earlier. The current ratio (current assets over current liabilities) is down 8.8 per cent to 0.60. Long term debt is 62.7 per cent of total assets, down from 63.9 per cent in 1994.

There were 76,706 persons employed by electric utilities in 1995, a decline of 3.4% from the previous year. Employment declined in most provinces and territories, mainly due to restructuring by major utilities. Wages and salaries edged slightly upward by 0.6 per cent for a total wage bill of \$4,229 million in 1995. Publicly operated utilities reported total wages and salaries of \$3,871 million, while private utilities reported \$358 million.

Cost of Fuels

Electric utilities reported expenditures of \$1,803 million on fuel for thermal electric plants in 1995, up 5.5% from a year earlier. The amount spent on petroleum products increased 33.6% to \$313 million, while that on natural gas increased 8.1% to \$313 million. At the same time, expenditures on coal increased 1.5% to \$997 million. Imports account for approximately one-quarter of the sum spent on coal.

It should be noted that the values presented above have been taken from Table 6. They may differ from values appearing in Table 8 due to collection period differences (e.g. table 6 is calendar year while table 8 is fiscal year) and accounting procedures (e.g. royalties paid on coal production are included in Table 6 but shown as a separate item on Table 8).

Generating Capacity

Total generating capacity in Canada at the end of 1995 reached 116 599 MW, an increase of 3.1% from the 1994 level of 112 967 MW. In 1995, utilities' generating capacity totalled 109 670 MW, while industry reported 6 923 MW. New stations totalled 2910 MW in 1995, of which hydro accounted for 2 721 MW.

For further information, refer to Electric Power Generating Stations, catalogue no. 57-206-XPB.

L'actif était de 142 870 millions\$, en hausse de 0,4% comparativement à l'année précédante. Le ratio de liquidité générale (l'actif à court terme divisé par le passif à court terme) est passé à 0,66, en baisse de 8,8%. La dette à long terme représente 62,7% de l'actif, une diminution du niveau de 63,9% en 1994.

Il y avait 76 706 personnes à l'emploi des services d'électricité en 1995, une diminution de 3,4% comparativement à l'annnée précédante. Le niveau d'emploi a baissé dans la plupart des provinces et des territoires. Ceci s'explique en grande partie par la restructuration en cours des services les plus importants. Les traitements et salaires ont augmenté légèrement de 0,6% pour des dépenses en main d'oeuvre totalisant 4 229 millions\$ en 1995. Les services publics d'électricité ont déclaré des salaires et traitements de 3 871 millions\$, tandis que les services privés ont déclaré un montant de 358 millions\$.

Coût des combustibles

Les services d'électricité ont déclaré des dépenses de 1 803 millions\$ en combustibles pour leurs centrales thermiques en 1995, en hausse de 5,5% comparativement à l'année précédante. La somme dépensée pour les produits du pétrole a augmenté de 33,6% pour atteindre 313 millions\$, tandis que les dépenses en gaz naturel sont en hausse de 8,1% pour se chiffrer à 313 millions. Pendant la même période, les dépenses en charbon ont augmenté de 1,5% pour atteindre 997 millions\$. Les importations représentent environ un quart des achats de charbon.

Il est à noter que les valeurs présentées ci-dessus sont tirées du tableau 6. Elles peuvent varier par rapport à celles du tableau 8 en raison des différences dans la période de collecte des données (ex.le tableau 6 est fondé sur l'année civile et le tableau 8, sur l'année fiscale) et des procédures comptables (ex., les royautés payées sur la production de charbon sont incluses dans le tableau 6, mais sont considérées séparément dans le tableau 8).

Puissance génératrice

La puissance génératrice totale du Canada à la fin de 1995 était de 116 599 MW, en hausse de 3,1% de plus que les 112 967 MW de 1994. En 1995, la puissance génératrice des services a totalisé 109 670 MW, alors que celle de l'industrie s'est établie à 6 923 MW. En 1995, les nouvelles centrales ont totalisé 2 910 MW, dont 2 721 MW pour les centrales hydrauliques.

Pour en savoir plus, consulter la publication Centrales d'énergie électrique (no. 57-206-XPB -XPB au catalogue). Notes

Nota

- Table 3 has undergone two major changes since 1986.
- (a) The first of these involves the amount of energy received by industrial generators from utilities. In past years all receipts were recorded, but starting in 1986 only those receipts necessary to fulfil outside commitments are shown. Consequently, the line "Used by producers" has been greatly reduced as it represents only that energy "used" from own production. This reduction is balanced by an equal increase in utility sales to mining and manufacturing. Table 10 is not affected.
- (b) The consumption categories employed in this publication do not equate with the rate structures of the utilities. Respondents have been requested to classify their customers according to these consumption categories. Because of the ondoing nature of the task of upgrading the accuracy of this classification, there may be a certain lack of uniformity in these statistical series through time.

- Le tableau 3 a encouru deux changements majeurs depuis 1986.
- (a) Le premier changement concerne le montant d'énergie reçu par les producteurs "industriels" en provenance des producteurs dits "de services". Par le passé, toutes les réceptions étaient enregistrées, mais commençant en 1986, seulement les réceptions récessaires à remplir les engagements extérieurs sont rapportées. Conséquemment, la ligne "Utilisés par les producteurs" a été grandement réduite car elle représente seulement l'énergie "utilisée" provenant de sa propre production. Cette réduction est balancée par une augmentation égale dans les ventes des producteurs dit "de services" aux secteurs miniers et manufacturiers. Le tableau 10 n'est pas touché.
- (b) Les catégories de consommateurs employées dans cette publication ne correspondent pas avec la structure de tarification des distributeurs d'électricité. Il a été demandé aux répondants de classifier leurs clients selon les catégories de consommateurs présentées. À cause des revisions en cours afin d'améliorer la précision de cette classification, il peut y avoir quelques problèmes de consistance dans certaines séries chronologiques.

Methodology and Data Quality

This publication presents annual commodity and operating statistics on the electric utility industry in Canada (SIC 491 of the Standard Industrial Classification, Catalogue 12-501-XPB). For completeness, the report also provides power generation of industrial establishments with generating facilities.

Statistics on the supply and disposition of electric energy are compiled from a quarterly survey of all power producers in Canada (approximately 200 producers operating some 900 stations). The response rate for the survey is very high — over 98%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data. Exports and imports information are obtained from the National Energy Board.

Financial and operating statistics are compiled from an annual survey of all electric utilities in Canada. Response rate is 100% and as a consequence no estimation is required and no bias resulting from nonresponse is introduced.

Installed generating capacity data are obtained from an annual survey of electric utilities and industrial establishments which have at least one plant with total generating capacity of over 500 KW. The survey covers some 900 generating stations. For additional information, refer to Electric Power Generating Stations, Catalogue 57-206-XPB.

Data published in this report are subject to a certain degree of error, be it in differences in the interpretation of the questions, or mistakes introduced during processing. Reasonable efforts are made to ensure these errors are kept within acceptable limits through careful questionnaire design, liaison with major respondents, editing of data for inconsistencies and subsequent follow-up and quality control of manual processing operations. Historically, experience has indicated that the data rarely contain a serious error.

Méthodologie et qualité des données

La présente publication renferme des statistiques annuelles sur les produits et l'exploitation de l'industrie de l'énergie électrique au Canada (CTI 491 de la Classification type des industries, no 12-501-XPB au catalogue). Pour une image plus complète, on trouve également dans la publication des données sur la production d'énergie des établissements industriels qui ont des réseaux de production.

Les statistiques sur la disponibilité et l'écoulement de l'énergie électrique proviennent d'une enquête trimestrielle menée auprès de tous les producteurs d'électricité au Canada (environ 200 producteurs qui exploitent approximativement 900 centrales). Le taux de réponse à cette enquête est très élevé - s'établissant à plus de 98%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse. Les données ayant trait aux exportations et aux importations proviennent de l'Office national de l'énergie.

Les statistiques financières et d'exploitation sont tirées d'une enquête annuelle menée auprès de l'ensemble des entreprises publiques de production d'électricité au Canada. Le taux de réponse étant de 100%, il n'est pas nécessaire de procéder à une estimation et il n'existe pas de distorsion découlant de la non-réponse.

relatives à la puissance Les données génératrice installée proviennent d'une enquête annuelle sur les entreprises publiques de production d'électricité et les établissements industriels qui possèdent au moins une usine et dont la capacité de production globale dépasse 500 kW. L'enquête est menée auprès d'environ 900 centrales d'électricité. Pour obtenir d'autres renseignements, consultez la publication Centrales d'énergie électrique, no 57-206-XPB au catalogue

Les données diffusées dans la présente publication ne sont pas dépourvues d'un certain degré d'erreur, qu'il s'agisse d'écarts au niveau de l'interprétation des questions ou d'erreurs introduites en cours de traitement. Nous faisons des efforts raisonnables pour garantir que ces erreurs ne dépassent pas certaines limites acceptables, c'est-à-dire que nous soignons la conception du questionnaire, établissons la liaison avec les principaux répondants, vérifions les données pour en relever les incohérences et assurons le suivi subséquent et le contrôle de la qualité des opérations de traitement manuel. Selon notre expérience, les données contiennent rarement une erreur grave.

Glossary of Terms

Capability: The maximum that a station or equipment is capable of carrying under specific conditions.

Capacity: In the electric power industry, capacity has two meanings:

- System Capacity: The maximum power capability of a system. For example, a utility system might have a rated capacity of 5000 megawatts, or might sell 50 megawatts of capacity (i.e. of power).
- Equipment Capacity: The maximum power capability of a piece of equipment. For example, a generating unit might have a rated capacity of 50 megawatts.

Cogeneration: The combined production of electricity and useful heat. Cogeneration is often employed at industrial plants where the heat produced can be utilized in the manufacturing processes and for general space heating.

Conventional Generation: Electricity that is produced at a generating station where the prime movers are driven by gases or steam produced by burning fossil fuels.

Electric Utility: An organization that, as its prime purpose, generates, transmits and/or distributes electric energy for sale.

Firm Energy or Power: Electrical energy or power intended to be available at all times during the period of the agreement of its sale.

Grid: A network of electric power lines and connections.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water.

Installed Capacity: The capacity measured at the output terminals of all generating units in a station, without deducting station service requirements.

Interruptible Energy or Power: Energy or power made available under an agreement that permits curtailment or interruption of delivery at the option of the supplier.

Kilowatt (KW): The commercial unit of electric power; 1000 watts. A kilowatt can best be visualized as the total amount of power needed to light ten 100-watt light bulbs.

Glossaire des termes

Rendement optimum: Le niveau maximal d'électricité qu'une centrale ou un équipement est capable de transporter dans des conditions particulières.

Capacité: Dans l'industrie de l'énergie électrique, ce terme a deux significations:

- 1. Puissance du réseau: La capacité maximale de livraison d'énergie d'un réseau. Par exemple, un service d'électricité peut avoir une capacité nominale de 5 000 mégawatts, ou encore il peut vendre 50 mégawatts de capacité (c.-à-d. de puissance)
- 2. La puissance de transport de l'équipement: La capacité maximale de puissance qu'une certaine pièce de matériel est capable de transporter. Par exemple, un groupe de production d'électricité pourrait avoir une capacité nominale de 50 mégawatts.

Cogénération:

d'électricité et d'énergie thermique. La cogénération est souvent utilisée dans les usines où l'énergie thermique produite peut servir dans le contexte des processus de fabrication et pour chauffer les locaux.

Production classique: Électricité d'une centrale où la force motrice est de la vapeur d'eau ou des gaz d'échappement produits à partir de combustibles fossiles.

Entreprise publique de production d'électricité: Organisme dont l'objet principal est de produire, transmettre et(ou) distribuer de l'énergie électrique à vendre.

Puissance garantie: Puissance électrique disponible à tout moment pendant la période de l'entente.

Réseau: Réseau de conducteurs et de connections.

Energie hydro-électrique: Production d'électricité à partir de l'énergie Kinétique d'une chute d'eau.

Capacité installée: La capacité mesurée aux bornes de sortie de tous les groupes électriques d'une centrale, sans déduction des besoins de services de celle-ci.

Energie interruptible: Énergie disponible en vertu d'une entente qui autorise la diminution ou l'interruption de la livraison au gré du fournisseur.

Kilowatt (kW): Unité commerciale d'électricité égalant 1 000 watts, soit la quantité d'énergie requise pour allumer dix ampoules électriques de 100 watts. Kilowatt Hour (KW.h): The commercial unit of electric energy; 1000 watt hours. A kilowatt hour can best be visualized as the amount of electricity consumed by ten 100-watt light bulbs burning for an hour. One kilowatt hour is equal to 3.6 million joules.

Load: The amount of electric power or energy consumed by a particular customer or group of customers.

Load Factor: The ratio of the average load during a designed period to the peak or maximum load in that same period. (Usually expressed in per cent.)

Megawatt (MW): A unit of bulk power; 1000 kilowatts.

Megawatt Hour (MW.h): A unit of bulk energy; 1000 kilowatt hours.

Nuclear Power: Electricity generated at a electric power plant whose turbines are driven by steam generation in a reactor by heat from the fission of nuclear fuel.

Peak Demand: The maximum power demand registered by a customer or a group of customers or a system in a stated period of time such as a month or a year. The value may be the maximum instantaneous load or more, usually the average load over a designated interval of time, such as one hour, and is normally stated in kilowatts or megawatts.

Reserve Generating Capacity: The extra generating capacity required on any power system over and above the expected peak load. Such a reserve is required mainly for two reasons: (1) in case of an unexpected breakown of generating equipment; (2) in case the actual peak load is higher than forecast.

Winter Peak: The highest load on a power system during the six-month period October to March. The winter peak almost always occurs in January or early February.

Kilowattheure (kW.h): Unité commerciale d'énergie électrique égalant 1 000 wattheures, soit la quantité d'électricité consommée par dix ampoules électriques de 100 watts pendant une heure. Un kilowattheure est égal à 3,6 millions de joules.

Charge: Quantité de puissance ou d'énergie électrique consommée par un client particulier ou un groupe de clients.

Facteur de charge: Coefficient de la charge moyenne pendant une période donnée sur la charge de pointe maximale au cours de la même période (habituellement exprimée en pourcentage).

Mégawatt (MW): Unité de puissance égale à 1 000 kilowatts.

Mégawattheure (MW.h): Unité de puissance égale à 1 000 kilowattheures.

Energie nucléaire: Électricité produite dans une centrale électrique où la valeur actionnant les turbines provient de la chaleur dégagée par la fission atomique.

Demande de pointe: Charge maximale consommée par un client, un groupe de clients ou un réseau pendant une période fixe, par exemple un mois ou un an. Il peut s'agir de la charge maximale installée ou, de façon plus habituelle, de la charge moyenne sur un intervalle court, une heure par exemple. Exprimée normalement en kilowatts ou en mégawatts.

Capacité génératrice de réserve: Capacité supplémentaire requise dans un réseau d'électricité, en sus de la charge de pointe prévue. Une telle réserve est requise pour deux raisons principales: (1) en cas de panne imprévue du matériel électrogène; (2) au cas où la charge de pointe réelle serait supérieure aux prévisions.

Pointe de consommation hivernale: S'entend de la plus forte charge qu'un système d'énergie doit assumer pendant la période de six mois allant d'octobre à mars. La pointe de consommation hivernale survient presque toujours en janvier ou au début de février.

when you subscribe to the *Canadian Economic Observer*!

Understanding what is key to Canada's economic activity is important to virtually every successful business, particularly in today's highly competitive economy. Whether your company has 10 employees or 10,000, it's vital that you are equipped to anticipate the trends that could prove influential in the years ahead. One way is to subscribe to Canada's leading report card on the economy — the Canadian Economic Observer (CEO).

Whether your job requires you to access data, track trends or devise highly effective business plans, you'll find many uses for CEO. Packed with detailed charts, diagrams and tables, CEO is your hands-on tool for understanding the economy from the inside out. And CEO gives you the kind of in-depth, intelligent analysis you have come to expect from the world's leading statistical agency.

CEO is easy to use

Consultations with experts have contributed to *CEO*'s present, widely acclaimed format. The **Current Economic Conditions** section contains thought-provoking commentary on current issues, trends and developments. Economic growth, trade, financial market activity — all of the major economic developments across Canada are covered month to month, issue by issue.

The **Economic Events** section profiles developments in the previous month that had an impact on the economy. **Plus**, **CEO** has a topical **Feature Article** providing thoughtful insight into issues that either directly or indirectly affect all Canadians. A separate **Statistical Summary** carries a full range of hard data relating to important economic indicators: markets, prices, trade, demographics, unemployment and many others.

CEO offers solutions

As a subscriber, you'll be directly connected to Statistics Canada's economic analysts. You'll also receive a copy of *CEO*'s annual *Historical Statistical Summary* at no additional charge.

VISIT OUR WEB SITES www.statcan.ca

Subscribe to the *Canadian Economic Observer* (Catalogue # 11-010-XPB) TODAY for only \$227 in Canada plus applicable GST and PST and US\$227 in other countries. Call TOLL-FREE 1-800-267-6677 or FAX 1-800-889-9734 or (613) 951-1584 and use your VISA or MasterCard. You can also MAIL your order to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 076, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

des abonnés à L'Observateur économique canadien!

Il est important pour à peu près toutes les entreprises prospères de comprendre les grandes lignes de l'activité économique, surtout dans l'économie concurrentielle d'aujourd'hui. Que votre entreprise compte dix, cent ou plus de mille employés, vous voudrez sans doute vous équiper en vue d'anticiper les tendances qui peuvent exercer une influence sur les années à venir. Un bon moyen consiste à vous abonner au principal bulletin de santé économique du Canada: L'Observateur économique canadien (L'OEC).

L'OEC répond à vos besoins

Que vous ayez à consulter des données, à répérer de grandes tendances ou à concevoir des plans d'entreprises efficaces, L'OEC répondra à nombre de vos besoins. Rempli de tableaux, de graphiques et de diagrammes détaillés, L'OEC est l'outil pratique par excellence pour comprendre les

arcanes de la conjoncture économique. De plus, L'OEC vous offre le type d'analyse fouillée et intelligente à laquelle vous vous attendez d'un leader mondial dans le domaine de la statistique.

L'OEC est simple à utiliser

Des consultations avec plusieurs experts ont fait en sorte que le nouveau format de L'OEC reçoit aujourd'hui un accueil enthousiaste de la part de nos nombreux lecteurs. La section des Conditions économiques actuelles comprend des commentaires percutants sur des questions, des tendances et des développements économiques. La croissance économique, le commerce, l'activité des marchés financiers — les événements économiques marquants au Canada sont examinés dans chaque numéro mensuel

La section **Événements économiques** regroupe les faits d'actualité ayant eu un impact majeur sur l'économie au cours du mois précédent. **En plus**, **L'OEC** comprend une **Étude spéciale** qui examine en profondeur des sujets qui touchent directement ou indirectement presque tous les Canadiens et Canadiennes. Enfin, l'**Aperçu statistique** contient l'ensemble des chiffres réels pour les indicateurs économiques essentiels : les marchés, les prix, le commerce, la démographie, le chômage, et bien d'autres encore.

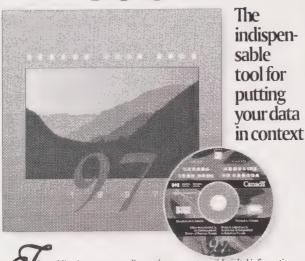

L'OEC vous offre des solutions

En tant qu'abonné, vous profiterez d'une communication directe avec les analystes de Statistique Canada. Vous recevrez également, sans frais additionnels, un exemplaire du Supplément statistique historique de L'OEC.

he publication you are reading at the moment provides vital information about a specific sector of activity in Canada, one of particular interest to you. But are you fully up to date with trends in other sectors, aware of their impact on your field? Canada Year Book 1997 and Canada Year Book 1997 on CD-ROM place your specialized knowledge in a national context. Clarifying the wider issues affecting the country as a whole, they provide the authoritative background for the application of your unique expertise.

Presenting..

- More than 300 tables, charts and graphs presenting the latest
- Detailed index
- Exciting visual presentation of the country through 100 stunning photographs
- 80 fascinating feature articles on distinctive aspects of life in Canada
- Durable hardcover binding

Canada Year Book 1997 (Catalogue No. 11-402-XPE97001) \$54.95 in Canada (plus \$4.95 shipping/handling and applicable taxes)

... the CD-ROM!

- Windows® and Macintosh™ on the same disc
- Powerful search capacity, index menus, hypertext links
- GBook™software to exploit CYB97's full potential
- 🗱 video clips and accompanying audio to enhance the visual experience
- III English and French versions on the same disc

Canada Year Book 1997 on CD-ROM (Catalogue No. 11-402-XCB97001) \$74.95 in Canada (plus \$4.95 shipping/handling and applicable taxes)

In print or on screen, Canada Year Book 1997 will quickly prove to be an invaluable, much-consulted addition to your library ...at a very reasonable price!

Statistiques annuelles de l'énergie électrique

1996

Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this publication and related statistics or services should be directed to: Energy Section, Manufacturing, Construction & Energy Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone (613) 951-9823) or to the Statistics Canada Regional Reference Centre in:

| Halifax | (902) | 426-5331 | Regina | (306) | 780-5405 |

Ordering/Subscription information

All prices exclude sales tax

A paper version, catalogue no. 57-202-XPB is published annually for \$30.00 per issue in Canada. Outside Canada the cost is US \$30.00 per issue.

Please send orders to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa Ontario, K1A 0T6 or by dialing (613) 951-7277 or 1 800 700-1033, by fax (613) 951-1584 or 1 800 889-9734 or by Internet: order@statcan.ca. For change of address, please provide both old and new addresses. Statistics Canada publications may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à: Section de l'énergie, Division de la fabrication, de la construction et de l'énergie, Statistique Canada, Ottawa, Ontario, K1A OT6 téléphone: (613) 951-9823) ou à l'un des centres de consultation régionaux de Statistique Canada:

| Halifax | (902) | 426-5331 | Regina | (306) | 780-5405 |

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

Note: Due to the nature of this publication the following standard symbols regularly used in Statistics Canada publications have been omitted.

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- p preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

Metric measures

GW.h. (gigawatt hour) = Watt hour \times 10⁹ MW.h. (megawatt hour) = Watt hour \times 10⁶

TW.h. (terawatt hour) = Watt hour \times 10¹²

KW.h. (kilowatt hour) = Watt hour \times 10³

Acknowledgements

This publication was prepared under the direction of:

- George Andrusiak, Director, Manufacturing, Construction & Energy Division
- Mel Jones, Assistant Director, Manufacturing, Construction & Energy Division
- Ron Rasia, Chief, Energy Section
- Serge Grenier, Unit Head, Energy Section (613) 951-3566

Signes conventionnels

Note: Due à la nature particulière de cette publication, les symboles ci-dessous, couramment employé par Statistique Canada, ont été omis.

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

Mesures métriques

TW.h (térawatt heure) = Watt heure \times 10¹² GW.h (gigawatt heure) = Watt heure \times 10⁹ MW.h (mégawatt heure) = Watt heure \times 10⁶ KW.h (kilowatt heure) = Watt heure \times 10³

Remerciements

Cette publication a été rédigée sous la direction de:

- George Andrusiak, directeur, Division de la fabrication, de la construction et de l'énergie
- Mel Jones, directeur-adjoint, Division de la fabrication, de la construction et de l'énergie
- Ron Rasia, chef, Section de l'énergie
- Serge Grenier, chef d'unité, Section de l'énergie (613) 951-3566

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

Electricity Generation

In 1996, net electricity generation (total generation less energy used in generating station service) increased 2.4% to 555 681 GW.h. Of the total electricity generated, 511 842 GW.h was for use in Canada, an increase of 2.5% from 1995. The remaining 43 839 GW.h was exported, an increase of 0.9% from the previous year. The electric power industry represents 3.0 per cent of cent of Canada's Gross Domestic Product.

Hydro is the main source (64 per cent) of electricity generation in Canada. Hydro stations produced 352 603 GW.h, up 6.0% from 1995. British Columbia accounted for most of the increase in hydro generation due to high reservoir levels. Generation from nuclear sources declined 5.2% from 1995 to 87 510 GW.h due to extended shutdowns of nuclear capacity in Ontario. Production from conventional steam plants declined by 3.0% to 104 930 GW.h. It is the second most important source of electricity in Canada in 1996.

Domestic demand for electricity (including self-generated electricity) rose 2.2 per cent to 518 025 GW.h in 1996. The main factor is the rise in residential use, which is up 2.8 per cent to 135 248 GW.h. Industrial use increased 0.8 per cent to 206 808 GW.h.

Sales

Total domestic sales of electricity to ultimate customers rose 1.5% in 1996 to 435 193 GW.h. Revenue received from sales totalled \$25,536 million, up 1.7% from 1995. As a means of comparison, the Consumer Price Index for electricity rose by 1.1 per cent during the same period.

Revenues per kilowatt-hour for residential and agricultural sales for 1996 are 7.14 cents, down 1.2% from 1995. Revenues range from 5.63 cents per kilowatt-hour in Manitoba to 26.52 cents per kilowatt-hour in the Northwest Territories.

Financial Data

Operating revenues of electric utilities rose 3.5% in 1996 to \$35,766 million. Meanwhile, operating expenses increased 5.6% to \$24,143 million. Electric utilities registered a net loss of \$4.0 million in 1995 thanks to a large corporate write-down in Ontario. Excluding Ontario, electric utilities registered a net income of \$1,732 million, up 27.0% from 1995.

Faits saillants

Production d'électricité

En 1996, la production nette d'électricité (la production totale moins l'énergie utilisée pour l'entretien de la centrale) a augmenté de 2,4% pour se chiffrer à 555 681 GW.h. 511 842 GW.h de la production totale d'électricité étaient destinés au Canada, en hausse de 2.5% comparativement à 1995. Les autres 43 839 GW.h ont été exportés, une hausse de 0,9% relativement à l'année précédante. L'industrie de l'énergie électrique représente 3,0% du produit intérieur brut du Canada.

Les ressources hydrauliques sont la principale source (64%) de la production d'électricité au Canada. Les centrales hydrauliques ont produit 352 603 GW.h, en hausse de 6,0% comparativement à 1995. La raison principale de la hausse est le haut niveau de réservoirs en Colombie-Britannique. La production d'électricité à partir de source nucléaire a chuté de 5,2% depuis 1995 pour atteindre 87 510 GW.h à cause de fermetures prolongées de la capacité nucléaire de l'Ontario. La production des centrales à vapeur classiques a baissé de 3,0% pour atteindre 104 930 GW.h. Elles sont la deuxième plus importante source d'électricité au Canada en 1996.

La demande intérieure pour l'électricité (y compris l'électricité produite pour auto-consommation) a augmenté de 2,2% en 1996 pour totaliser 518 025 GW.h. Une hausse de 2,8% de la demande pour usage résidentiel à 135 248 GW.h est la raison principale de cette augementation. Le côté industriel a connu une hausse de 0,8% pour totaliser 206 808 GW.h

Ventes

Les ventes intérieures d'électricité aux abonnés ultimes ont augmenté de 1,5% en 1996 pour se chiffrer à 435 193 GW.h. Les recettes provenant des ventes étaient de 25 536 millions\$, en hausse de 1,7% comparativement à 1995. À titre de comparaison, l'Indice des prix à la consommation pour l'électricité a augmenté de 1.1% pendant la même période.

Les recettes des ventes aux secteurs résidentiel et agricole étaient de 7,14 cents par kilowatt-heure en 1996, en baisse de 1,2% de 1995. Les recettes vont de 5,63 cents par kilowatt-heure au Manitoba à 26,52 cents par kilowatt-heure dans les Territoires du Nord-Ouest.

Données financières

Les recettes d'exploitation des services d'électricité ont augmenté de 3,5% en 1996 pour atteindre \$35,766 millions\$, tandis que les dépenses d'exploitation ont augmenté de 5.6% pour totaliser 24 143 millions\$. Les services d'électricité ont enregistré des pertes de 4,0 millions\$ en 1995 à cause d'une perte comptable considérable en Ontario. En excluant l'Ontario, les services d'électricité ont enregistré un revenu net de 1 732 millions de dollars, en hausse de 27,0% comparativement à 1995.

Total assets stood at \$143,661 million, up 0.6% from a year earlier. The current ratio (current assets over current liabilities) is up 0.7 per cent to 0.61. Long term debt is 62.8 per cent of total assets, down from 62.7 per cent in 1995.

There were 75,198 persons employed by electric utilities in 1996, a decline of 3.1% from the previous year. Wages and salaries decreased 2.6 per cent for a total wage bill of \$4,242 million in 1996. Publicy operated utilities reported total wages and salaries of \$3,902 million, while private utilities reported \$340 million.

Cost of Fuels

Electric utilities reported expenditures of \$1,699 million on fuel for thermal electric plants in 1996, down 1.8% from a year earlier. The amount spent on petroleum products decreased 12.5% to \$274 million, while that on natural gas decreased 5.3% to \$235 million. At the same time, expenditures on coal increased 3.7% to \$1,030 million. Imports account for 32.5% of the sum spent on coal.

It should be noted that the values presented above have been taken from Table 6. They may differ from values appearing in Table 8 due to collection period differences (e.g. table 6 is calendar year while table 8 is fiscal year) and accounting procedures (e.g. royalties paid on coal production are included in Table 6 but shown as a separate item on Table 8).

Generating Capacity

Total generating capacity in Canada at the end of 1996 reached 113 570 MW, a decrease of 2.6% from the 1995 level of 116 546 MW. In 1996, utilities' generating capacity totalled 106 813 MW, while industry reported 6 757 MW. New stations totalled 1090 MW in 1996, of which hydro accounted for 625 MW.

For further information, refer to Electric Power Generating Stations, catalogue no. 57-206-XPB.

L'actif était de 143 661 millions\$, en hausse de 0,6% comparativement à l'année précédante. Le ratio de liquidité générale (l'actif à court terme divisé par le passif à court terme) est passé à 0,61, en hausse de 0.7%. La dette à long terme représente 62,8% de l'actif, une diminution du niveau de 62,7% en 1995.

Il y avait 75 198 personnes à l'emploi des services d'électricité en 1996, une diminution de 3,1% comparativement à l'annnée précédante. Les traitements et salaires ont diminué de 2,6% pour des dépenses en main d'oeuvre qui totalisent 4 242 millions\$ en 1996. Les services publics d'électricité ont déclaré des salaires de 3 902 millions\$, tandis que ceux du secteur privé ont déclaré un montant de 340 millions\$.

Coût des combustibles

Les services d'électricité ont déclaré des dépenses de 1 699 millions\$ en combustibles pour leurs centrales thermiques en 1996, en baisse de 1,8% comparativement à l'année précédante. La somme dépensée pour les produits du pétrole a diminué de 12,5% pour atteindre 274 millions\$, tandis que les dépenses en gaz naturel sont en baisse de 5,3% pour se chiffrer à 235 millions\$. Pendant la même période, les dépenses en charbon ont augmenté de 3,7% pour se chiffrer à 1 030 millions\$. Les importations représentent 32,5% des achats de charbon.

Il est à noter que les valeurs présentées ci-dessus sont tirées du tableau 6. Elles peuvent varier par rapport à celles du tableau 8 en raison des différences dans la période de collecte des données (ex.le tableau 6 est fondé sur l'année civile et le tableau 8, sur l'année fiscale) et des procédures comptables (ex., les royautés payées sur la production de charbon sont incluses dans le tableau 6, mais sont considérées séparément dans le tableau 8).

Puissance génératrice

La puissance génératrice totale du Canada à la fin de 1996 était de 113 570 MW, en baisse de 2,6% de la capacité de 116 546 MW de 1995. En 1996, la puissance génératrice des services a totalisé 106 813 MW, alors que celle de l'industrie s'est établie à 6 757 MW. En 1996, les nouvelles centrales ont totalisé 1 090 MW, dont 625 MW pour les centrales hydrauliques.

Pour en savoir plus, consulter la publication Centrales d'énergie électrique (no. 57-206-XPB -XPB au catalogue).

- Table 3 has undergone two major changes since 1986.
- (a) The first of these involves the amount of energy received by industrial generators from utilities. In past years all receipts were recorded, but starting in 1986 only those receipts necessary to fulfil outside commitments are shown. Consequently, the line "Used by producers" has been greatly reduced as it represents only that energy "used" from own production. This reduction is balanced by an equal increase in utility sales to mining and manufacturing. Table 10 is not affected.
- (b) The consumption categories employed in this publication do not equate with the rate structures of the utilities. Respondents have been requested to classify their customers according to these consumption categories. Because of the ondoing nature of the task of upgrading the accuracy of this classification, there may be a certain lack of uniformity in these statistical series through time.
- (c) In Table 6, subbituminous coal represents both Canadian and foreign subbituminous coal. Subbituminous coal consumed is Canadian except in Manitoba and 48 700 metric tonnes in Ontario.
- (d) In Table 7, beginning in 1996, the current portion of a sinking fund is now reported as an asset, while the sinking fund is reported as part of long-term debt. This change in financial reporting was recommended by the Canadian Institute of Chartered Accountants.

- Le tableau 3 a encouru deux changements majeurs depuis 1986.
- (a) Le premier changement concerne le montant d'énergie reçu par les producteurs "industriels" en provenance des producteurs dits "de services". Par le passé, toutes les réceptions étaient enregistrées, mais commençant en 1986, seulement les réceptions récessaires à remplir les engagements extérieurs sont rapportées. Conséquemment, la ligne "Utilisés par les producteurs" a été grandement réduite car elle représente seulement l'énergie "utilisée" provenant de sa propre production. Cette réduction est balancée par une augmentation égale dans les ventes des producteurs dit "de services" aux secteurs miniers et manufacturiers. Le tableau 10 n'est pas touché.
- (b) Les catégories de consommateurs employées dans cette publication ne correspondent pas avec la structure de tarification des distributeurs d'électricité. Il a été demandé aux répondants de classifier leurs clients selon les catégories de consommateurs présentées. À cause des revisions en cours afin d'améliorer la précision de cette classification, il peut y avoir quelques problèmes de cohérence dans certaines séries chronologiques.
- (c) Sur le tableau 6, le charbon sousbitumineux comprend les charbons sousbitumineux canadiens et importés. La consommation de charbon sousbitumineux est canadienne à l'exception de celle au Manitoba et de 48 700 tonnes métriques en Ontario.
- (d) Dans le tableau 7, à partir de 1996, la portion courante d'un fonds de roulement est déclarée comme un actif, tandis que le fonds de roulement est déclaré comme faisant partie de la dette à long-terme. Ce changement dans la présentation d'états financiers a été recommandée par l'Institut canadien des comptables agréés.

Methodology and Data Quality

This publication presents annual commodity and operating statistics on the electric utility industry in Canada (SIC 491 of the Standard Industrial Classification, Catalogue 12-501-XPB). For completeness, the report also provides power generation of industrial establishments with generating facilities.

Statistics on the supply and disposition of electric energy are compiled from a quarterly survey of all power producers in Canada (approximately 200 producers operating some 900 stations). The response rate for the survey is very high - over 98%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data. Exports and imports information are obtained from the National Energy Board.

Financial and operating statistics are compiled from an annual survey of all electric utilities in Canada. Response rate is 100% and as a consequence no estimation is required and no bias resulting from non-response is introduced.

Installed generating capacity data are obtained from an annual survey of electric utilities and industrial establishments which have at least one plant with total generating capacity of over 500 KW. The survey covers some 900 generating stations. For additional information, refer to Electric Power Generating Stations, Catalogue 57-206-XPB.

Data published in this report are subject to a certain degree of error, be it in differences in the interpretation of the questions, or mistakes introduced during processing. Reasonable efforts are made to ensure these errors are kept within acceptable limits through careful questionnaire design, liaison with major respondents, editing of data for inconsistencies and subsequent follow-up and quality control of manual processing operations. Historically, experience has indicated that the data rarely contain a serious error.

Méthodologie et qualité des données

La présente publication renferme des statistiques annuelles sur les produits et l'exploitation de l'industrie de l'énergie électrique au Canada (CTI 491 de la Classification type des industries, no 12-501-XPB au catalogue). Pour une image plus complète, on trouve également dans la publication des données sur la production d'énergie des établissements industriels qui ont des réseaux de production.

Les statistiques sur la disponibilité et l'écoulement de l'énergie électrique proviennent d'une enquête trimestrielle menée auprès de tous les producteurs d'électricité au Canada (environ 200 producteurs qui exploitent approximativement 900 centrales). Le taux de réponse à cette enquête est très élevé - s'établissant à plus de 98%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse. Les données ayant trait aux exportations et aux importations proviennent de l'Office national de l'énergie.

Les statistiques financières et d'exploitation sont tirées d'une enquête annuelle menée auprès de l'ensemble des services d'électricité au Canada. Le taux de réponse étant de 100%, il n'est pas nécessaire de procéder à une estimation et il n'existe pas de distorsion découlant de la non-réponse.

Les données relatives à la puissance génératrice installée proviennent d'une enquête annuelle sur les services d'électricité et les établissements industriels qui possèdent au moins une usine et dont la capacité de production globale dépasse 500 KW. L'enquête est menée auprès d'environ 900 centrales d'énergie électrique. Pour obtenir d'autres renseignements, consultez la publicapublication Centrales d'énergie électrique, no. 57-206-XPB au catalogue.

Les données diffusées dans la présente publication ne sont pas dépourvues d'un certain degré d'erreur, qu'il s'agisse d'écarts au niveau de l'interprétation des questions ou d'erreurs introduites en cours de traitement. Nous faisons des efforts raisonnables pour garantir que ces erreurs ne dépassent pas certaines limites acceptables, c'est-à-dire que nous soignons la conception du questionnaire, établissons la liaison avec les principaux répondants, vérifions les données pour en relever les incohérences et assurons le suivi subséquent et le contrôle de la qualité des opérations de traitement manuel. Selon notre expérience, les données contiennent rarement une erreur grave.

Glossary of Terms

Capability: The maximum that a station or equipment is capable of carrying under specific conditions.

Capacity: In the electric power industry, capacity has two meanings:

- System Capacity: The maximum power capability of a system. For example, a utility system might have a rated capacity of 5000 megawatts, or might sell 50 megawatts of capacity (i.e. of power).
- Equipment Capacity: The maximum power capability of a piece of equipment. For example, a generating unit might have a rated capacity of 50 megawatts.

Cogeneration: The combined production of electricity and useful heat. Cogeneration is often employed at industrial plants where the heat produced can be utilized in the manufacturing processes and for general space heating.

Conventional Generation: Electricity that is produced at a generating station where the prime movers are driven by gases or steam produced by burning fossil fuels.

Electric Utility: An organization that, as its prime purpose, generates, transmits and/or distributes electric energy for sale.

Firm Energy or Power: Electrical energy or power intended to be available at all times during the period of the agreement of its sale.

Grid: A network of electric power lines and connections.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water.

Installed Capacity: The capacity measured at the output terminals of all generating units in a station, without deducting station service requirements.

Interruptible Energy or Power: Energy or power made available under an agreement that permits curtailment or interruption of delivery at the option of the supplier.

Kilowatt (KM): The commercial unit of electric power; 1000 watts. A kilowatt can best be visualized as the total amount of power needed to light ten 100-watt light bulbs.

Glossaire des termes

Rendement optimum: Le niveau maximal d'électricité qu'une centrale ou un équipement est capable de transporter dans des conditions particulières.

Capacité: Dans l'industrie de l'énergie électrique, ce terme a deux significations:

- Puissance du réseau: La capacité maximale de livraison d'énergie d'un réseau. Par exemple, un service d'électricité peut avoir une capacité nominale de 5 000 mégawatts, ou encore il peut vendre 50 mégawatts de capacité (c.-à-d. de puissance)
- 2. La puissance de transport de l'équipement: La capacité maximale de puissance qu'une certaine pièce de matériel est capable de transporter. Par exemple, un groupe de production d'électricité pourrait avoir une capacité nominale de 50 mégawatts.

Cogénération: Production combinée d'électricité et d'énergie thermique. La cogénération est souvent utilisée dans les usines où l'énergie thermique produite peut servir dans le contexte des processus de fabrication et pour chauffer les locaux.

Production classique: Électricité d'une centrale où la force motrice est de la vapeur d'eau ou des gaz d'échappement produits à partir de combustibles fossiles.

Entreprise publique de production d'électricité: Organisme dont l'objet principal est de produire, transmettre et(ou) distribuer de l'énergie électrique à vendre.

Puissance garantie: Puissance électrique disponible à tout moment pendant la période de l'entente.

Réseau: Réseau de conducteurs et de connections.

Energie hydro-électrique: Production d'électricité à partir de l'énergie kinétique d'une chute d'eau.

Capacité installée: La capacité mesurée aux bornes de sortie de tous les groupes électriques d'une centrale, sans déduction des besoins de services de celle-ci.

Energie interruptible: Énergie disponible en vertu d'une entente qui autorise la diminution ou l'interruption de la livraison au gré du fournisseur.

Kilowatt (KW): Unité commerciale d'électricité égalant 1 000 watts, soit la quantité d'énergie requise pour allumer dix ampoules électriques de 100 watts.

Kilowatt Hour (KW.h): The commercial unit of electric energy; 1000 watt hours. A kilowatt hour can best be visualized as the amount of electricity consumed by ten 100-watt light bulbs burning for an hour. One kilowatt hour is equal to 3.6 million joules.

Load: The amount of electric power or energy consumed by a particular customer or group of customers.

Load Factor: The ratio of the average load during a designed period to the peak or maximum load in that same period. (Usually expressed in per cent.)

Megawatt (MW): A unit of bulk power; 1000 kilowatts.

Megawatt Hour (MW.h): A unit of bulk energy; 1000 kilowatt hours.

Nuclear Power: Electricity generated at a electric power plant whose turbines are driven by steam generation in a reactor by heat from the fission of nuclear fuel.

Peak Demand: The maximum power demand registered by a customer or a group of customers or a system in a stated period of time such as a month or a year. The value may be the maximum instantaneous load or more, usually the average load over a designated interval of time, such as one hour, and is normally stated in kilowatts or megawatts.

Reserve Generating Capacity: The extra generating capacity required on any power system over and above the expected peak load. Such a reserve is required mainly for two reasons:

(1) in case of an unexpected breakown of generating equipment; (2) in case the actual peak load is higher than forecast.

Winter Peak: The highest load on a power system during the six-month period October to March. The winter peak almost always occurs in January or early February.

Kilowattheure (kw.h): Unité commerciale d'énergie électrique égalant 1 000 wattheures, soit la quantité d'électricité consommée par dix ampoules électriques de 100 watts pendant une heure. Un kilowattheure est égal à 3,6 millions de joules.

Charge: Quantité de puissance ou d'énergie électrique consommée par un client particulier ou un groupe de clients.

Facteur de charge: Coefficient de la charge moyenne pendant une période donnée sur la charge de pointe maximale au cours de la même période (habituellement exprimée en pourcentage).

Mégawatt (MN): Unité de puissance égale à 1 000 kilowatts.

Mégawattheure (MN.h): Unité de puissance égale à 1 000 kilowattheures.

Énergie nucléaire: Électricité produite dans une centrale électrique où la valeur actionnant les turbines provient de la chaleur dégagée par la fission atomique.

Demande de pointe: Charge maximale consommée par un client, un groupe de clients ou un réseau pendant une période fixe, par exemple un mois ou un an. Il peut s'agir de la charge maximale installée ou, de façon plus habituelle, de la charge moyenne sur un intervalle court, une heure par exemple. Exprimée normalement en kilowatts ou en mégawatts.

Capacité génératrice de réserve: Capacité supplémentaire requise dans un réseau d'électricité, en sus de la charge de pointe prévue. Une telle réserve est requise pour deux raisons principales: (1) en cas de panne imprévue du matériel électrogène; (2) au cas où la charge de pointe réelle serait supérieure aux prévisions.

Pointe de consommation hivernale: S'entend de la plus forte charge qu'un système d'énergie doit assumer pendant la période de six mois allant d'octobre à mars. La pointe de consommation hivernale survient presque toujours en janvier ou au début de février.

MERCI DE VOTRE COMMANDE!

Statistique Canada Statistics Canada

Suggess is within:

when you subscribe to the *Canadian Economic Observer*!

Understanding what is key to Canada's economic activity is important to virtually every successful business, particularly in today's highly competitive economy. Whether your company has 10 employees or 10,000, it's vital that you are equipped to anticipate the trends that could prove influential in the years ahead. One way is to subscribe to Canada's leading report card on the economy — the Canadian Economic Observer (CEO).

CEO meets your needs

Whether your job requires you to access data, track trends or devise highly effective business plans, you'll find many uses for *CEO*. Packed with detailed charts, diagrams and tables, *CEO* is your hands-on tool for understanding the economy from the inside out. And *CEO* gives you the kind of in-depth, intelligent analysis you have come to expect from the world's leading statistical agency.

CEO is easy to use

Consultations with experts have contributed to *CEO*'s present, widely acclaimed format. The **Current Economic Conditions** section contains thought-provoking commentary on current issues, trends and developments. Economic growth, trade, financial market activity — all of the major economic developments across Canada are covered month to month, issue by issue.

The **Economic Events** section profiles developments in the previous month that had an impact on the economy. **Plus**, **CEO** has a topical **Feature Article** providing thoughtful insight into issues that either directly or indirectly affect all Canadians. A separate **Statistical Summary** carries a full range of hard data relating to important economic indicators: markets, prices, trade, demographics, unemployment and many others.

CEO offers solutions

As a subscriber, you'll be directly connected to Statistics Canada's economic analysts. You'll also receive a copy of *CEO*'s annual *Historical Statistical Summary* at no additional charge.

des abonnés à L'Observateur économique canadien!

Il est important pour à peu près toutes les entreprises prospères de comprendre les grandes lignes de l'activité économique, surtout dans l'économie concurrentielle d'aujourd'hui. Que votre entreprise compte dix, cent ou plus de mille employés, vous voudrez sans doute vous équiper en vue d'anticiper les tendances qui peuvent exercer une influence sur les années à venir. Un bon moyen consiste à vous abonner au principal bulletin de santé économique du Canada: L'Observateur économique canadien (L'OEC).

L'OEC répond à vos besoins

Que vous ayez à consulter des données, à répérer de grandes tendances ou à concevoir des plans d'entreprises efficaces, L'OEC répondra à nombre de vos besoins. Rempli de tableaux, de graphiques et de diagrammes détaillés, L'OEC est l'outil pratique par excellence pour comprendre les

arcanes de la conjoncture économique. De plus, L'OEC vous offre le type d'analyse fouillée et intelligente à laquelle vous vous attendez d'un leader mondial dans le domaine de la statistique.

L'OEC est simple à utiliser

Des consultations avec plusieurs experts ont fait en sorte que le nouveau format de *L'OEC* reçoit aujourd'hui un accueil enthousiaste de la part de nos nombreux lecteurs. La section des **Conditions économiques actuelles** comprend des commentaires percutants sur des questions, des tendances et des développements économiques. La croissance économique, le commerce, l'activité des marchés financiers — les événements économiques marquants au Canada sont examinés dans chaque numéro mensuel.

La section Événements économiques regroupe les faits d'actualité ayant eu un impact majeur sur l'économie au cours du mois précédent. *En plus*, *L'OEC* comprend une Étude spéciale qui examine en profondeur des sujets qui touchent directement ou indirectement presque tous les Canadiens et Canadiennes. Enfin, l'Aperçu statistique contient l'ensemble des chiffres réels pour les indicateurs économiques essentiels : les marchés, les prix, le commerce, la démographie, le chômage, et bien d'autres encore.

L'OEC vous offre des solutions

En tant qu'abonné, vous profiterez d'une communication directe avec les analystes de Statistique Canada. Vous recevrez également, sans frais additionnels, un exemplaire du Supplément statistique bistorique de L'OEC.

visitez notre site interneti www.statcan.ca

Abonnez-vous dès AUJOURD'HUT à L'Observateur économique canadisen (numéro au catalogue 11-010-XPB) pour seulement 227 \$ au Canada (TPS/TVII et TVP en sus, s'il y a lieu) et 227 \$ US dans les autres pays. Vous pouvez également envoyez votre commande par la POSTE à l'adresse suivante Statistique Canada, Division des opérations et de l'intégration, Gestion de la circulation, 120, av. Parkdale, Ottawa (Ontario) KIAOT6. Ou communiquez avec le Centre de consultation régional de Statistique Canada le plus près et dont la liste figure dans la présente publication

Perspectives on Labour and Income...

L'emploi et le revenu en perspective...

... pour comprendre les

enjeux et les tendances du

complets.

... your window onto critical issues and pertinent trends in the workplace!

ramatic shifts and new challenges are now facing Canadian business professionals. Never before has it been <u>so</u> difficult to stay on top of changing labour market trends. Now, more than ever, you need a dependable resource to give you accurate, timely and complete information — straight from

es changements importants et de nouveaux défis sont au menu pour les gens d'affaires. Jamais n'a-t-il été si difficile de suivre l'évolution du marché du travail. D'où l'absolue nécessité de vous renseigner à la source pour obtenir des renseignements exacts, actuels et

Turn to *Perspectives on Labour and Income* ... your comprehensive journal from Statistics Canada!

the source.

A topical quarterly journal,

Perspectives will keep you up-to-date*
on current labour market trends and save you hours of research time by giving you the information you need to:

- anticipate significant developments;
- evaluate labour conditions;
- plan new programs or services;
- formulate proposals; and
- prepare reports that support your organization's policies.

Statistique Canada vous propose sa revue détaillée, L'emploi et le revenu en perspective.

Tous les trimestres, vous pourrez comprendre les tendances observées dans le marché du travail et consacrer moins de temps à la recherche, en consultant les renseignements dont vous avez besoin pour :

- prévoir les changements importants;
- évaluer la situation du marché du travail;
- planifier de nouveaux programmes ou services;
- formuler des recommandations;
- rédiger des rapports appuyant les politiques de votre organisation.

Compiled from data obtained from Statistics Canada surveys and administrative sources so you can rely on its accuracy, *Perspectives*' detailed information helps you <u>make informed decisions</u> on complex labour issues.

As a <u>special feature</u>, at mid-year and end-of-year, a **Labour Market Review** is included, giving you valuable intelligence into the labour market's performance.

L'emploi et le revenu en perspective s'appuie sur les données de nombreuses enquêtes de Statistique Canada et de diverses sources administratives. Son contenu détaillé vous permet de <u>prendre des décisions éclairées</u> sur les questions complexes qui touchent l'emploi.

<u>De plus</u>, tous les six mois, vous recevrez **Le bilan du marché du travail**, qui renferme des renseignements précieux sur la performance du marché du travail.

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Highlights

Electricity Generation

In 1997, net electricity generation (total generation less energy used in generating station service) increased 0.2% to 556 928 GW.h. Of the total electricity generated, 511 697 GW.h was for use in Canada, unchanged from 1996. The remaining 45 230 GW.h was exported, an increase of 3.2% from the previous year. The electric power industry represents 2.9 per cent of Canada's Gross Domestic Product.

Hydro is the main source (62 per cent) of electricity generation in Canada. Hydro stations produced 347 243 GW.h, down 1.5% from 1996. Generation from nuclear sources declined 11.0% from 1996 to 77 857 GW.h due to extended shutdowns of nuclear capacity in Ontario. Production from conventional steam plants increased by 13.9% to 119 485 GW.h. It is the second most important source of electricity in Canada since 1996.

Domestic demand for electricity (including self-generated electricity) rose 0.6 per cent to 521 196 GW.h in 1997. The main factor is the rise in industrial use, which is up 1.8 per cent to 210 669 GW.h. Residential use decreased 0.6 per cent to 134 489 GW.h.

Sales

Total domestic sales of electricity to ultimate customers rose 1.6% in 1997 to 442 147 GW.h. Revenue received from sales totalled \$25,878 million, up 1.3% from 1996. As a means of comparison, the Consumer Price Index for electricity rose by 1.1 per cent during the same period.

Revenues per kilowatt-hour for residential and agricultural sales for 1997 are 7.22 cents, up 1.1% from 1996. Revenues range from 5.80 cents per kilowatt-hour in Manitoba to 27.66 cents per kilowatt-hour in the Northwest Territories.

Financial Data

Operating revenues of electric utilities rose 1.8% in 1997 to \$36,421 million. Meanwhile, operating expenses increased 4.1% to \$25,140 million. Electric utilities registered a net loss of \$4,087 million in 1997 thanks to a large corporate write-down in Ontario. Excluding Ontario, electric utilities registered a net income of \$1,984 million, up 14.5% from 1996.

Faits saillants

Production d'électricité

En 1997, la production nette d'électricité (la production totale moins l'énergie utilisée pour l'entretien de la centrale) a augmenté de 0,2% pour se chiffrer à 556 928 GW.h. 511 697 GW.h de la production totale d'électricité était destinée au Canada, un chiffre inchangé comparativement à 1996. Les autres 45 230 GW.h ont été exportés, une hausse de 3,2% relativement à l'année précédente. L'industrie de l'énergie électrique représente 2,9% du produit intérieur brut du Canada.

Les ressources hydrauliques sont la principale source (62%) de la production d'électricité au Canada. Les centrales hydrauliques ont produit 347 243 GW.h, en baisse de 1,5% comparativement à 1996. La production d'électricité à partir de source nucléaire a chuté de 11,0% depuis 1996 pour atteindre 77 857 GW.h à cause de fermetures prolongées de la capacité nucléaire de l'Ontario. La production des centrales à vapeur classiques a augmenté de 13,9% pour atteindre 119 485 GW.h. Elles sont la deuxième plus importante source d'électricité au Canada depuis 1996.

La demande intérieure pour l'électricité (y compris l'électricité produite pour auto-consommation) a augmenté de 0,6% en 1997 pour totaliser 521 196 GW.h. Une hausse de 1,8% de la demande par le secteur industriel à 210 669 GW.h est la raison principale de cette augmentation. Le côté résidentiel a connu une baisse de 0,6% pour totaliser 134 489 GW.h.

Ventes

Les ventes intérieures d'électricité aux abonnés ultimes ont augmenté de 1,6% en 1997 pour se chiffrer à 442 147 GW.h. Les recettes provenant des ventes à étaient de 25 878 millions\$, en hausse de 1,3% comparativement à 1996. À titre de comparaison, l'Indice des prix à la consommation pour l'électricité a augmenté de 1,1% pendant la même période.

Les recettes des ventes aux secteurs résidentiel et agricole étaient de 7,22 cents par kilowatt-heure en 1997, en hausse de 1,1% de 1996. Les recettes vont de 5,80 cents par kilowatt-heure au Manitoba à 27,66 cents par kilowatt-heure dans les Territoires du Nord-Ouest.

Données financières

Les recettes d'exploitation des services d'électricité ont augmenté de 1,8% en 1997 pour atteindre 36 421 millions\$, tandis que les dépenses d'exploitation ont augmenté de 4,1% pour totaliser 25 140 millions\$. Les services d'électricité ont enregistré des pertes de 4 087 millions\$ en 1996 à cause d'une perte comptable considérable en Ontario. En excluant l'Ontario, les services d'électricité ont enregistré un revenu net de 1 984 millions de dollars, en hausse de 14,5% comparativement à 1996.

Total assets stood at \$145,664 million, up 1.4% from a year earlier. The current ratio (current assets over current liabilities) is down 13 per cent to 0.53. Long term debt is 60.8 per cent of total assets, down from 62.8 per cent in 1996.

There were 72,994 persons employed by electric utilities in 1997, a decline of 2.9% from the previous year. Wages and salaries increased 1.9 per cent for a total wage bill of \$4,279 million in 1997. Publicly operated utilities reported total wages and salaries of \$3,950 million, while private utilities reported \$329 million.

Cost of fuels

Electric utilities reported expenditures of \$1,906 million on fuel for thermal electric plants in 1997, up 12.2% from a year earlier. The expansion of generating capacity using natural gas led to a 70.8% increase in expenditures on natural gas to \$401 million. The amount spent on petroleum products decreased 18.4% to \$223 million. At the same time, expenditures on coal increased 8.1% to \$1,113 million. Imports account for 41.8% of the sum spent on coal. The average delivered efficiency of thermal plants is 32.0%, down from 33.0% in 1996.

It should be noted that the values presented above have been taken from Table 6. They may differ from values appearing in Table 8 due to collection period differences (e.g. table 6 is calendar year while table 8 is fiscal year) and accounting procedures (e.g. royalties paid on coal production are included in Table 6 but shown as a separate item on Table 8).

Generating Capacity

Total generating capacity in Canada at the end of 1997 reached 112 606 MW, a decrease of 0.7% from the 1996 level of 113 446 MW. In 1997, utilities' generating capacity totalled 105 854 MW, while industry reported 6 752 MW. New stations totalled 845 MW in 1997, of which hydro accounted for 150 MW.

For further information, refer to *Electric Power Generating Stations*, catalogue no. 57-206-XPB.

L'actif était de 145 664 millions\$, en hausse de 1,4% comparativement à l'année précédente. Le ratio de liquidité générale (l'actif à court terme divisé par le passif à court terme) est passé à 0,53, en baisse de 13%. La dette à long terme représente 60,8% de l'actif, une diminution du niveau de 62,8% en 1996.

Il y avait 72 994 personnes à l'emploi des services d'électricité en 1996, une diminution de 2,9% comparativement à l'année précédente. Les traitements et salaires ont augmenté de 1,9% pour des dépenses en main d'œuvre qui totalisent 4 279 millions\$ en 1997. Les services publics d'électricité ont déclaré des salaires de 3 950 millions\$, tandis que ceux du secteur privé ont déclaré un montant de 329 millions\$.

Coût des combustibles

Les services d'électricité ont déclaré des dépenses de 1 906 millions\$ en combustibles pour leurs centrales thermiques en 1997, en hausse de comparativement à l'année précédente. L'expansion de la capacité de production utilisant du gaz naturel a mené à une hausse de 70,8% des dépenses en gaz naturel pour atteindre \$401 millions. La somme dépensée pour les produits du pétrole a diminué de 18,4% pour atteindre 223 millions\$. Pendant la même période, les dépenses en charbon ont augmenté de 8,1% pour se chiffrer à 1 113 millions\$. Les importations représentent 41,8% des achats de charbon. L'efficacité moyenne de livraison des centrales thermiques est de 32,0%, inférieur au taux de 33.0% de 1996.

Il est à noter que les valeurs présentées ci-dessus sont tirées du tableau 6. Elles peuvent varier par rapport à celles du tableau 8 en raison des différences dans la période de collecte des données (ex. le tableau 6 est fondé sur l'année civile et le tableau 8, sur l'année fiscale) et des procédures comptables (ex., les royautés payées sur la production de charbon sont incluses dans le tableau 6, mais sont considérées séparément dans le tableau 8).

Puissance génératrice

La puissance génératrice totale du Canada à la fin de 1997 était de 112 606 MW, en baisse de 0,7% de la capacité de 113 446 MW de 1996. En 1997, la puissance génératrice des services a totalisé 105 854 MW, alors que celle de l'industrie s'est établie à 6 752 MW. En 1997, les nouvelles centrales ont totalisé 845 MW, dont 150 MW pour les centrales hydrauliques.

Pour en savoir plus, consulter la publication *Centrales* d'énergie électrique (no. 57-206-XPB au catalogue).

Notes

- Table 3 has undergone two major changes since 1986.
- (a) The first of these involves the amount of energy received by industrial generators from utilities. In past year all receipts were recorded, but starting in 1986 only those receipts necessary to fulfil outside commitments are shown. Consequently, the line "Used by producers" has been greatly reduced as it represents only that energy "used" from own production. This reduction is balanced by an equal increase in utility sales to mining and manufacturing. Table 10 is not affected.
- (b) The consumption categories employed in this publication do not equate with the rate structures of the utilities. Respondents have been requested to classify their customers according to these consumption categories. Because of the ongoing nature of the task of upgrading the accuracy of this classification, there may be a certain lack of uniformity in these statistical series through time.
- In Table 7, beginning in 1996, the current portion of a sinking fund is now reported as an asset, while the sinking fund is reported as part of long-term debt. This change in financial reporting was recommended by the Canadian Institute of Chartered Accountants.

Nota

- Le tableau 3 a encouru deux changements majeurs depuis 1986.
- (a) Le premier changement concerne le montant d'énergie reçu par les producteurs "industriels" en provenance des producteurs dits "de services". Par le passé, toutes les réceptions étaient enregistrées, mais commençant en 1986, seulement les réceptions nécessaires à remplir les engagements extérieurs sont rapportées. Conséquemment, la ligne "Utilisés par les producteurs" a été grandement réduite car elle représente seulement l'énergie "utilisée" provenant de sa propre production. Cette réduction est balancée par une augmentation égale dans les ventes des producteurs dit " de services" aux secteurs miniers et manufacturiers. Le tableau 10 n'est pas touché.
- (b) Les catégories de consommateurs employées dans cette publication ne correspondant pas avec la structure de tarification des distributeurs d'électricité. Il a été demandé aux répondants de classifier leurs clients selon les catégories de consommateurs présentées. À cause des révisions en cours afin d'améliorer la précision de cette classification, il peut y avoir quelques problèmes de cohérence dans certaines séries chronologiques.
- 2. Dans le tableau 7, à partir de 1996, la portion courante d'un fonds de roulement est déclarée comme un actif, tandis que le fonds de roulement est déclarée comme faisant partie de la dette à long-terme. Ce changement dans la présentation d'états financiers a été recommandée par l'Institut canadien des comptables agréés.

Methodology and Data Quality

This publication presents annual commodity and operating statistics on the electric utility industry in Canada (code 2211 of the North American Industrial Classification System, catalogue number 12-501-XPE). For completeness, the report also provides data on industrial establishments with generating facilities.

Statistics on the supply and disposition of electric energy are compiled from a quarterly survey of all power producers in Canada (approximately 200 producers operating some 900 stations). The response rate for the survey is very high - over 98%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data. Exports and imports information are obtained from the National Energy Board.

Financial and operating statistics are compiled from an annual survey of major electric utilities in Canada. The response rate for the survey is over 95%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data.

Installed generating capacity data are obtained from an annual survey of electric utilities and industrial establishments which have at least one plant with total generating capacity of over 500 KW. The survey covers some 900 generating stations. For additional information, refer to *Electric Power Generating Stations*, catalogue 57-206-XPB.

Data published in this report are subject to a certain degree of error, be it in differences in the interpretation of the questions, or mistakes introduced during processing. Reasonable efforts are made to ensure these errors are kept within acceptable limits through careful questionnaire design, liaison with major respondents, editing of data for inconsistencies and subsequent follow-up and quality control of manual processing operations. Historically, experience has indicated that the data rarely contain a serious error.

Méthodologie et qualité des données

La présente publication renferme des statistiques annuelles sur les produits et l'exploitation de l'industrie de l'énergie électrique au Canada (code 2211 du Système de classification des industries de l'Amérique du Nord, no. 12-501-XPE au catalogue). Pour une image plus complète, on trouve également dans la publication des données sur les établissements industriels qui ont des capacités de production.

Les statistiques sur la disponibilité et l'écoulement de l'énergie électrique proviennent d'une enquête trimestrielle menée auprès de tous les producteurs d'électricité au Canada (environ 200 producteurs qui exploitent approximativement 900 centrales). Le taux de réponse à cette enquête est très élevé - s'établissant à plus de 98%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse. Les données ayant trait aux exportations et aux importations proviennent de l'Office national de l'énergie.

Les statistiques financières et d'exploitation sont tirées d'une enquête annuelle menée auprès des principaux services d'électricité au Canada. Le taux de réponse à cette enquête s'établi à plus de 95%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse.

Les données relatives à la puissance génératrice installée proviennent d'une enquête annuelle sur les services d'électricité et les établissements industriels qui possèdent au moins une usine et dont la capacité de production globale dépasse 500 KW. L'enquête est menée auprès d'environ 900 centrales d'énergie électrique. Pour obtenir d'autres renseignements, consultez la publication Centrales d'énergie électrique, no. 57-206-XPB au catalogue.

Les données diffusées dans la présente publication ne sont pas dépourvues d'un certain degré d'erreur, qu'il s'agisse d'écarts au niveau de l'interprétation des questions ou d'erreurs introduites en cours de traitement. Nous faisons des efforts raisonnables pour garantir que ces erreurs ne dépassent pas certaines limites acceptables, c'est-à-dire que nous soignons la conception du questionnaire, établissons la liaison avec les principaux répondants, vérifions les données pour en relever les incohérences et assurons le suivi subséquent et le contrôle de la qualité des opérations de traitement manuel. Selon notre expérience, les données contiennent rarement une erreur grave.

Glossary of Terms

Capability: The maximum that a station or equipment is capable of carrying under specific conditions.

Capacity: In the electric power industry, capacity has two meanings:

- System Capacity: The maximum power capability of a system. For example, a utility system might have a rated capacity of 5,000 megawatts, or might sell 50 megawatts of capacity (i.e. of power).
- Equipment Capacity: The maximum power capability of a piece of equipment. For example, a generating unit might have a rated capacity of 50 megawatts.

Cogeneration: The combined production of electricity and useful heat. Cogeneration is often employed at industrial plants where the heat produced can be utilized in the manufacturing processes and for general space heating.

Conventional Generation: Electricity that is produced at a generating station where the prime movers are driven by gases or steam produced by burning fossil fuels.

Electric Utility: An organization that, as its prime purpose, generates, transmits and/or distributes electric energy for sale.

Firm energy or power: Electrical energy or power intended to be available at all times during the period of the agreement of its sale.

Grid: A network of electric power lines and connections.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water.

Installed Capacity: The capacity measured at the output terminals of all generating units in a station, without deducting station service requirements.

Interruptible Energy or Power: Energy or power made available under an agreement that permits curtailment or interruption of delivery at the option of the supplier.

Kilowatt (KW): The commercial unit of electric power; 1000 watts. A kilowatt can best be visualized as the total amount of power needed to light ten 100-watt light bulbs.

Glossaire des termes

Rendement optimum: Le niveau maximal d'électricité qu'une centrale ou un équipement est capable de transporter dans des conditions particulières.

Capacité: Dans l'industrie de l'énergie électrique, ce terme a deux significations:

- Puissance du réseau: La capacité maximale de livraison d'énergie d'un réseau. Par exemple, un service d'électricité peut avoir une capacité nominale de 5 000 mégawatts, ou encore il peut vendre 50 mégawatts de capacité (c.-à-d. de puissance)
- La puissance de transport de l'équipement: La capacité maximale de puissance qu'une certaine pièce de matériel est capable de transporter. Par exemple, un groupe de production d'électricité pourrait avoir une capacité nominale de 50 mégawatts.

Congénération: Production combinée d'électricité et d'énergie thermique. La congénération est souvent utilisée dans les usines où l'énergie thermique produite peut servir dans le contexte de processus de fabrication et pour chauffer les locaux.

Production classique: Électricité d'une centrale où la force motrice est de la vapeur d'eau ou des gaz d'échappement produits à partir de combustibles fossiles.

Entreprise publique de production d'électricité: Organisme dont l'objet principal est de produire, transmettre et (ou) distribuer de l'énergie électrique à vendre.

Puissance garantie: Puissance électrique disponible à tout moment pendant la période de l'entente.

Réseau: Réseau de conducteurs et de connections.

Énergie hydro-électrique: Production d'électricité à partir de l'énergie kinétique d'une chute d'eau.

Capacité installée: La capacité mesurée aux bornes de sortie de tous les groupes électriques d'une centrale, sans déduction des besoins de services de celle-ci.

Énergie interruptible: Énergie disponible en vertu d'une entente qui autorise la diminution ou l'interruption de la livraison au gré du fournisseur.

Kilowatt (KW): Unité commerciale d'électricité égalant 1000 watts, soit la quantité d'énergie requise pour allumer dix ampoules électriques de 100 watts.

Kilowatt Hour (KW.h): The commercial unit of electric energy; 1000 watt hours. A kilowatt hour can best be visualized as the amount of electricity consumed by ten 100-watt light bulbs burning for an hour. One kilowatt hour is equal to 3.6 million joules.

Load: The amount of electric power or energy consumed by a particular customer or group of customers.

Load Factor: The ratio of the average load during a designed period to the peak or maximum load in that same period. (Usually expressed in per cent.)

Megawatt (MW): A unit of bulk power; 1,000 kilowatts.

Megawatt Hour (MW.h): A unit of bulk energy; 1,000 kilowatt hours.

Nuclear Power: Electricity generated at an electric power plant whose turbines are driven by steam generation in a reactor by heat from the fission of nuclear fuel.

Peak Demand: The maximum power demand registered by a customer or a group of customers or a system in a stated period of time such as a month or a year . The value may be the maximum instantaneous load or more, usually the average load over a designated interval of time, such as one hour, and is normally stated in kilowatts megawatts.

Reserve Generating Capacity: The extra generating capacity required on any power system over and above the expected peak load. Such a reserve is required mainly for two reasons: (1) in case of an unexpected breakdown of generating equipment; (2) in case the actual peak load is higher than forecast.

Winter Peak: The highest load on a power system during the six-month period October to March. The winter peak almost always occurs in January or early February. Kilowattheure (KW.h): Unité commerciale d'énergie électrique égalant 1000 wattheures, soit la quantité d'électricité consommée par dix ampoules électriques de 100 watts pendant une heure. Un kilowattheure est égal à 3,6 millions de joules.

Charge: Quantité de puissance ou d'énergie électrique consommée par un client particulier ou un groupe de clients.

Facteur de charge: Coefficient de la charge moyenne pendant une période donnée sur la charge de pointe maximale au cours de la même période (habituellement exprimée en pourcentage).

Mégawatt (MW): Unité de puissance égale à 1 000 kilowatts.

Mégawattheure (MW.h): Unité de puissance égale à 1 000 kilowattheures.

Énergie nucléaire: Électricité produite dans une centrale électrique où la valeur actionnant les turbines provient de la chaleur dégagée par la fission atomique.

Demande de la pointe: Charge maximale consommée par un client, un groupe de clients ou un réseau pendant une période fixe, par exemple un mois ou un an. Il peut s'agir de la charge maximale installée ou, de façon plus habituelle, de la charge moyenne sur un intervalle court, une heure par exemple. Exprimée normalement en kilowatts ou en mégawatts.

Capacité génératrice de réserve: Capacité supplémentaire requise dans un réseau d'électricité, en sus de la charge de pointe prévue. Une telle réserve est requise pour deux raisons principales: (1) en cas de panne imprévue du matériel électrogène; (2) au cas où la charge de pointe réelle serait supérieure aux prévisions.

Pointe de consommation hivernale: S'entend de la plus forte charge qu'un système d'énergie doit assumer pendant la période de six mois allant d'octobre à mars. La pointe de consommation hivernale survient presque toujours en janvier ou au début de février.

MERCI DE VOTRE COMMANDE!

THE STATISTICS CANADA EARLY MORNING START-UP SPECIAL

Every morning at 8:30 a.m., Monday to Friday, Internet users can display the day's top socio-economic data simply by selecting *Daily News* on Statistic Canada's Web site at www.statcan.ca. There is no charge for this service.

The Daily is an early-bird review of the latest official data and information released by Statistics Canada. Key economic indicators like employment rates and the Consumer Price Index, in addition to a wide range of business-related information, make The Daily the #1 choice for business people who want to keep upto-date on the country's most important economic developments ... as they happen. It is also the best source for concise briefs on the state of the economy and Canadian society in general.

HERE'S JUST A TASTE OF WHAT YOU'LL FIND AT OUR SITE:

- gross domestic product
- income characteristics
- household information
- population statistics
- motor vehicle sales
- fuel prices
- international trade
- agricultural data
- employment rates
- consumer price indexes
- international transactions in securities
- census data

- investment
- wholesale and retail trade
- national accounts and balance of payments
- shipments
- travel statistics
- construction
- manufacturing
 - ... and more

FIND OUT WHY JOURNALISTS ACROSS CANADA ACCESS THE DAILY EVERY WORKING DAY

The media has long relied on *The Daily* for the information contained in many of the news reports Canadians read or listen to on a regular basis. Now you, too, can link up to this same information quickly and conveniently. What's more; *The Daily* will keep you tuned to the timing and delivery of major Statistics Canada releases and the arrival of our newest products and services.

So, pull up a chair and visit us at our Web site soon. We want your day to get off to the right start.

POUR PARTIR DU BON PIED : **LE QUOTIDIEN** DE STATISTIQUE CANADA

- statistiques sur la population
- ventes de véhicules automobiles
- prix du carburant
- commerce international
- données sur l'agriculture
- taux d'emploi
- indices des prix à la consommation

Dès 8 h 30, du lundi au vendredi, les utilisateurs d'Internet peuvent consulter les principales données socioéconomiques de la journée en accédant aux *Nouvelles du Quotidien* sur le site Web de Statistique Canada à www.statcan.ca. Le service est gratuit.

Le Quotidien permet un survol rapide des plus récentes données et analyses officielles que diffuse Statistique Canada. Des indicateurs économiques clés tels que les taux d'emploi et les indices des prix à la consommation, auxquels s'ajoute l'éventail des données sur l'activité commerciale, font du Quotidien le choix idéal pour les gens d'affaires qui souhaitent être informés des faits saillants de l'économie... dès qu'ils surviennent. C'est aussi la source par excellence de résumés succincts sur l'état de l'économie et de la société canadienne en général.

VOICI UN APERÇU DU CONTENU :

- produit intérieur brut
- caractéristiques du revenu
- renseignements sur les ménages opérations internationales en valeurs mobilières données de recensement données sur les investissements commerce de gros et de détail comptes nationaux et balance des paiements livraisons manufacturières statistiques des voyages construction fabrication

VOYEZ POURQUOI, PARTOUT AU PAYS, LES JOURNALISTES LISENT *LE QUOTIDIEN* CHAQUE JOUR OUVRABLE

... et plus

Depuis longtemps, les médias puisent dans *Le Quotidien* l'information qui alimente un bon nombre de reportages que les Canadiens lisent ou entendent régulièrement. Désormais, vous aussi pouvez y accéder rapidement et en temps utile. *Le Quotidien* vous informera de l'heure et de la parution des principaux communiqués de Statistique Canada et de l'arrivée de nos plus récents produits et services.

Market Research Handbook 1999

Unlock Canadian Consumer and Business Markets...

he ALL-NEW Market Research Handbook 1999 reveals the Canadian marketplace the way no other statistical resource can. It delivers first hand results from more than 20 specialized Statistics Canada surveys, plus the very latest details from the 1996 Census, in one practical sourcebook!

For entrepreneurs, market researchers, planners and analysts, for big business and small, Market Research Handbook 1999 is an invaluable and comprehensive decision-support tool.

Capitalize on opportunities...

- spot emerging market trends
- position your products effectively
- gain a competitive edge in an increasingly volatile and competitive economy
- ... and manage the future of your market!

ANALYZE THE CONDITIONS IN YOUR MARKET – FROM THE LOCAL TO THE NATIONAL LEVEL - USING:

Key Demographic Variables

- population
- age
- household expenditures
- education earnings
- ▶ sex and more!
- retail sales

Vital Economic Indicators

- ▶ labour force productivity
- consumer and industrial
- private and public investment international trade data ▶ Gross Domestic Product
- and more!
- price indexes

Business Demographics

- by industry
- size of business
- urban area plus more!

New for 1999!

- immigrants by intended occupation
- Internet service providers: types of services, regional composition and sources of revenue
- population projections for Nunavut
- household expenditures including games of chance expense (ie. Casino), as well as detailed clothing and health care expenses
- number and receipts of movie theatres including number of screens and seats
- more fields of study for full-time undergraduate enrolment
- employment change and life status of businesses

Market Research Handbook 1999 (Cat. No. 63-224-XPB) costs \$125 in Canada (plus either HST or GST and applicable PST) and US\$125 outside Canada. To order, CALL toll-free at 1 800 267-6677, FAX 1 877 287-4369 or MAIL your order to Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, Canada KIA 0T6. Or contact your nearest Statistics Canada Regional Reference Centre listed in this publication. You may also order via E-MAIL: order@statcan.ca

Recueil statistique des études de marché 1999

Pénétrez les marchés de consommation et daffaires canadiens ...

e TOUT DERNIER Recueil statistique des études de marché 1999 fait état du marché canadien comme aucune autre source statistique ne le fait. Il réunit les résultats de plus de 20 enquêtes spéciales de Statistique Canada, de même que <u>les plus récentes données du</u> Recensement de 1996, dans un seul guide de référence pratique!

Pour les entrepreneurs, comme pour les spécialistes des études de marché, les planificateurs et les analystes, de même que pour les grandes et petites entreprises, le Recueil statistique des études de marché 1999 constitue un outil complet de très grande

Tirez profit des possibilités...

- repérez les nouvelles tendances
- positionnez vos produits efficacement
- obtenez un avantage concurrentiel au sein d'une économie de concurrence sans cesse changeante
- et gérez l'avenir de votre marché!

Analysez les conditions de votre marché – à l'échelle RÉGIONALE OU NATIONALE - EN UTILISANT :

Les principales variables démographiques

- population
- âge
- dépenses des ménages
- scolarité
- sexe
- ventes au détail
- revenu et plus!

Les indicateurs économiques

- données sur la productivité de la population active
- investissements privés et publiques ▶ indices des prix à la consommation
- commerce international et de l'industrie produit intérieur bru et plus!

La démographie des entreprises

- secteur d'activité
- ▶ taille de l'entreprise
- région urbaine ▶ et plus!

Nouveau pour 1999!

- les immigrants selon la profession projetée
- les fournisseurs de services Internet : type de services, composition régionale et sources de revenus
- les projections de la population du Nunavut
- les dépenses des ménages, y compris celles consacrées aux jeux de hasard (c.-à-d. au casino), ainsi qu'un bilan détaillé des dépenses sur l'habillement et les soins de santé
- le nombre de cinémas et leurs recettes, y compris le nombre d'écrans et de sièges
- une ventilation plus détaillée des domaines d'études des étudiants à plein temps de premier cycle
- variation de l'emploi et statut des entreprises

Recueil statistique des études de marché 1999 (n° 63-224-XPB au catalogue) se vend 125 \$ au Canada (plus, soit la TVH, soit la TPS et la TVP en vigueur) et 125 \$ US à l'extérieur du Canada. Pour commander, TÉLÉPHONEZ sans frais au 1800 267-6677, TÉLÉCOPIEZ vos commandes au 1877 287-4369 ou POSTEZ votre commande à Statistique Canada, Division de la diffusion, Gestion de la circulation, 120, avenue Parkdale, Ottawa (Ontario) Canada KIA 076. Ou communiquez avec votre Centre de consultation régional de Statistique Canada le plus près de chez vous mentionné dans la présente publication. Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

Symbols

Note: Due to the nature of this publication the following standard symbols regularly used in Statistics Canada publications have been omitted.

Highlights

Electricity Generation

In 1998, net electricity generation (total generation less energy used in generating station service) decreased 2.2% to 544,900 GW.h. Of the total electricity generated, 500,288 GW.h was for use in Canada, a decrease of 2.2% from 1997. The remaining 44,612 GW.h was exported, a decrease of 1.4% from the previous year. The electric power industry represents 2.7 per cent of Canada's Gross Domestic Product.

Hydro is the main source (60 per cent) of electricity generation in Canada. Hydro stations produced 328,626 GW.h, down 5.4% from 1997. This decline is attributed mainly to low reservoir levels in Quebec and Manitoba. Generation from nuclear sources declined 13.3% from 1997 to 67,467 GW.h due to extended shutdowns of nuclear capacity in Ontario. To compensate for the loss of hydro and nuclear generating capacity, production from conventional steam plants increased by 13.3% to 135,569 GW.h. It is the second most important source of electricity in Canada since 1997. Electric power utilities operated at a capacity utilization rate of 85.7% in 1998, down from 86.0% in 1997.

Domestic demand for electricity (including self-generated electricity) declined 0.7 per cent to 517,565 GW.h in 1998. The main factor is the decline in residential use, which decreased 3.8 per cent to 129,322 GW.h. Industrial use increased 1.4 per cent to 213,411 GW.h.

Sales

Total domestic sales of electricity to ultimate customers declined 0.9% in 1998 to 438,384 GW.h. Revenue received from sales totalled \$25,929 million, up 0.2% from 1997. As a means of comparison, the Consumer Price Index for electricity rose by 0.9 per cent during the same period.

Revenues per kilowatt-hour for residential and agricultural sales for 1998 are 7.32 cents, up 1.4% from 1997. Revenues range from 5.93 cents per kilowatt-hour in Manitoba to 29.93 cents per kilowatt-hour in the Northwest Territories.

Financial Data

Operating revenues of electric utilities rose 6.1% in 1998 to \$38,636 million. Meanwhile, operating expenses increased 12.4% to \$28,270 million. Electric utilities registered a net income of \$3,617 million in 1998, after registering a \$4,091 million loss in 1997.

Faits saillants

Production d'électricité

En 1998, la production nette d'électricité (la production totale moins l'énergie utilisée pour l'entretien de la centrale) a diminué de 2,2% pour se chiffrer à 544 900 GW.h. 500 288 GW.h de la production totale d'électricité était destinée au Canada, une diminution de 2.2% comparativement à 1997. Les autres 44 612 GW.h ont été exportés, une baisse de 1,4% relativement à l'année précédente. L'industrie de l'énergie électrique représente 2,7% du produit intérieur brut du Canada.

Les ressources hydrauliques sont la principale source (60%) de la production d'électricité au Canada. Les centrales hydrauliques ont produit 328 626 GW.h, en baisse de 5,4% comparativement à 1997. Des faibles niveaux d'eau dans les réservoirs au Québec et au Manitoba sont les causes principales de cette baisse. La production d'électricité à partir de source nucléaire a chuté de 13,3% depuis 1997 pour atteindre 67 467 GW.h à cause de fermetures prolongées de la capacité nucléaire de l'Ontario. Pour compenser la perte de capacité de production hydraulique et nucléaire, la production des centrales à vapeur classiques a augmenté de 13.3% pour atteindre 135 569 GW.h. Elles sont la deuxième plus importante source d'électricité au Canada depuis 1997. Les services d'électricité ont été exploitées avec un taux d'utilisation de la capacité de 85,7% en 1998, en baisse du taux de 86,0 % en 1997.

La demande intérieure pour l'électricité (y compris l'électricité produite pour auto-consommation) a diminué de 0,7% en 1998 pour totaliser 517 565 GW.h. Une baisse de 3,8% de la demande par le secteur résidentiel à 129 322 GW.h est la raison principale de cette diminution. Le côté industriel a connu une hausse de 1,4% pour totaliser 213 411 GW.h.

Ventes

Les ventes intérieures d'électricité aux abonnés ultimes ont diminué de 0,9% en 1998 pour se chiffrer à 438 384 GW.h. Les recettes provenant des ventes étaient de 25 929 millions\$, en hausse de 0,2% comparativement à 1997. À titre de comparaison, l'Indice des prix à la consommation pour l'électricité a augmenté de 0,9% pendant la même période.

Les recettes des ventes aux secteurs résidentiel et agricole étaient de 7,32 cents par kilowatt-heure en 1998, en hausse de 1,4% de 1997. Les recettes vont de 5,93 cents par kilowatt-heure au Manitoba à 29,93 cents par kilowatt-heure dans les Territoires du Nord-Ouest.

Données financières

Les recettes d'exploitation des services d'électricité ont augmenté de 6,1% en 1998 pour atteindre 38 636 millions\$, tandis que les dépenses d'exploitation ont augmenté de 12,4% pour totaliser 28 270 millions\$. Les services d'électricité ont enregistré un bénéfice net de

Total assets stood at \$148,971 million, up 2.3% from a year earlier. The current ratio (current assets over current liabilities) is up 4.1 per cent to 0.55. Long term debt is 60.8 per cent of total assets, the same as in 1997.

There were 71,231 persons employed by electric utilities in 1998, a decrease of 0.9% from the previous year. Wages and salaries decreased 1.0 per cent for a total wage bill of \$3,986 million in 1998. Publicly operated utilities reported total wages and salaries of \$3,681 million, while private utilities reported \$305 million.

Cost of fuels

The increased use of conventional steam plants to compensate for the loss of hydro and nuclear generating capacity led to expenditures by electric utilities of \$2,495 million on fuel for thermal electric plants in 1998, up 22.0% from a year earlier. Increased generating capacity and replacement of hydro power led to a 38.0% increase in expenditures on natural gas to \$553 million. The amount spent on petroleum products increased 26.2% to \$459 million. At the same time, expenditures on coal increased 18.5% to \$1,319 million. Imports account for 53.2% of the sum spent on coal. The average delivered efficiency of thermal plants is 32.3%, up from 32.1% in 1997.

It should be noted that the values presented above have been taken from Table 6. They may differ from values appearing in Table 8 due to collection period differences (e.g. table 6 is calendar year while table 8 is fiscal year) and accounting procedures (e.g. royalties paid on coal production are included in Table 6 but shown as a separate item on Table 8).

Generating Capacity

Total generating capacity in Canada at the end of 1998 reached 109,984 MW, a decrease of 2.3% from the 1997 level of 112,607 MW. In 1998, utilities' generating capacity totalled 103,425 MW, while industry reported 6,559 MW. New stations totalled 158 MW in 1998.

For further information, refer to *Electric Power Generating Stations*, catalogue no. 57-206-XPB.

3 617 millions\$ en 1998, après avoir encouru des pertes de 4 091 millions\$ en 1997.

L'actif était de 148 971 millions\$, en hausse de 2,3% comparativement à l'année précédente. Le ratio de liquidité générale (l'actif à court terme divisé par le passif à court terme) est passé à 0,55, en hausse de 4,1%. La dette à long terme représente 60,8% de l'actif, identique au niveau de 1997.

Il y avait 71 231 personnes à l'emploi des services d'électricité en 1998, une diminution de 0,9% comparativement à l'année précédente. Les traitements et salaires ont diminué de 1,0% pour des dépenses en main d'œuvre qui totalisent 3 986 millions\$ en 1998. Les services publics d'électricité ont déclaré des salaires de 3 681 millions\$, tandis que ceux du secteur privé ont déclaré un montant de 305 millions\$.

Coût des combustibles

L'utilisation accrue des centrales à vapeur classique pour compenser pour la perte de puissance de production de source hydraulique et nucléaire ont mené à des dépenses de 2 495 millions\$ en combustibles de la part des services d'électricité pour leurs centrales thermiques en 1998, en hausse de 22,0% comparativement à l'année précédente. Une expansion de la capacité de production et le remplacement de capacité hydraulique ont mené à une hausse de 38,0% des dépenses en gaz naturel pour atteindre \$553 millions. La somme dépensée pour les produits du pétrole a augmenté de 26,2% pour atteindre 459 millions\$. Pendant la même période, les dépenses en charbon ont augmenté de 18,5% pour se chiffrer à 1 319 millions\$. Les importations représentent 53,2% des achats de charbon. L'efficacité moyenne de livraison des centrales thermiques est de 32,3%, supérieur au taux de 32.1% de 1997.

Il est à noter que les valeurs présentées ci-dessus sont tirées du tableau 6. Elles peuvent varier par rapport à celles du tableau 8 en raison des différences dans la période de collecte des données (ex. le tableau 6 est fondé sur l'année civile et le tableau 8, sur l'année fiscale) et des procédures comptables (ex., les royautés payées sur la production de charbon sont incluses dans le tableau 6, mais sont considérées séparément dans le tableau 8).

Puissance génératrice

La puissance génératrice totale du Canada à la fin de 1998 était de 109 984 MW, en baisse de 2,3% de la capacité de 112 607 MW de 1997. En 1998, la puissance génératrice des services a totalisé 103 425 MW, alors que celle de l'industrie s'est établie à 6 559 MW. En 1998, les nouvelles centrales ont totalisé 158 MW.

Pour en savoir plus, consulter la publication *Centrales* d'énergie électrique (no. 57-206-XPB au catalogue).

Notes

- 1. Table 3 has undergone two major changes since 1986.
- (a) The first of these involves the amount of energy received by industrial generators from utilities. In past year all receipts were recorded, but starting in 1986 only those receipts necessary to fulfil outside commitments are shown. Consequently, the line "Used by producers" has been greatly reduced as it represents only that energy "used" from own production. This reduction is balanced by an equal increase in utility sales to mining and manufacturing. Table 10 is not affected.
- (b) The consumption categories employed in this publication do not equate with the rate structures of the utilities. Respondents have been requested to classify their customers according to these consumption categories. Because of the ongoing nature of the task of upgrading the accuracy of this classification, there may be a certain lack of uniformity in these statistical series through time.
- In Table 7, beginning in 1996, the current portion of a sinking fund is now reported as an asset, while the sinking fund is reported as part of long-term debt. This change in financial reporting was recommended by the Canadian Institute of Chartered Accountants.
- In Table 3 and in Table 8, receipts and deliveries from the Power Pool of Alberta are treated as sales and purchases. Some companies only report the net transaction of their generation and distribution arms in their annual reports.

Nota

- Le tableau 3 a encouru deux changements majeurs depuis 1986.
- (a) Le premier changement concerne le montant d'énergie reçu par les producteurs "industriels" en provenance des producteurs dits "de services". Par le passé, toutes les réceptions étaient enregistrées, mais commençant en 1986, seulement les réceptions nécessaires à remplir les engagements extérieurs sont rapportées. Conséquemment, la ligne "Utilisés par les producteurs" a été grandement réduite car elle représente seulement l'énergie "utilisée" provenant de sa propre production. Cette réduction est balancée par une augmentation égale dans les ventes des producteurs dit " de services" aux secteurs miniers et manufacturiers. Le tableau 10 n'est pas touché.
- (b) Les catégories de consommateurs employées dans cette publication ne correspondant pas avec la structure de tarification des distributeurs d'électricité. Il a été demandé aux répondants de classifier leurs clients selon les catégories de consommateurs présentées. À cause des révisions en cours afin d'améliorer la précision de cette classification, il peut y avoir quelques problèmes de cohérence dans certaines séries chronologiques.
- 2. Dans le tableau 7, à partir de 1996, la portion courante d'un fonds de roulement est déclarée comme un actif, tandis que le fonds de roulement est déclarée comme faisant partie de la dette à long-terme. Ce changement dans la présentation d'états financiers a été recommandée par l'Institut canadien des comptables agréés.
- 3. Dans le tableau 3 et le tableau 8, les réceptions et les livraisons provenant du Power Pool of Alberta sont traitées comme des ventes et des achats. Certaines compagnies ne déclarent que la transaction nette de leur unités de production et de distribution dans leurs rapports annuels.

Methodology and Data Quality

This publication presents annual commodity and operating statistics on the electric utility industry in Canada (code 2211 of the North American Industrial Classification System, catalogue number 12-501-XPE). For completeness, the report also provides data on industrial establishments with generating facilities.

Statistics on the supply and disposition of electric energy are compiled from a quarterly survey of all power producers in Canada (approximately 200 producers operating some 900 stations). The response rate for the survey is very high - over 98%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data. Exports and imports information are obtained from the National Energy Board.

Financial and operating statistics are compiled from an annual survey of major electric utilities in Canada. The response rate for the survey is over 95%. As a consequence, minimal imputation is required and minimal bias resulting from non-response is introduced in these data.

Installed generating capacity data are obtained from an annual survey of electric utilities and industrial establishments which have at least one plant with total generating capacity of over 500 KW. The survey covers some 900 generating stations. For additional information, refer to *Electric Power Generating Stations*, catalogue 57-206-XPB.

Data published in this report are subject to a certain degree of error, be it in differences in the interpretation of the questions, or mistakes introduced during processing. Reasonable efforts are made to ensure these errors are kept within acceptable limits through careful questionnaire design, liaison with major respondents, editing of data for inconsistencies and subsequent follow-up and quality control of manual processing operations. Historically, experience has indicated that the data rarely contain a serious error.

Méthodologie et qualité des données

La présente publication renferme des statistiques annuelles sur les produits et l'exploitation de l'industrie de l'énergie électrique au Canada (code 2211 du Système de classification des industries de l'Amérique du Nord, no. 12-501-XPE au catalogue). Pour une image plus complète, on trouve également dans la publication des données sur les établissements industriels qui ont des capacités de production.

Les statistiques sur la disponibilité et l'écoulement de l'énergie électrique proviennent d'une enquête trimestrielle menée auprès de tous les producteurs d'électricité au Canada (environ 200 producteurs qui exploitent approximativement 900 centrales). Le taux de réponse à cette enquête est très élevé - s'établissant à plus de 98%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse. Les données ayant trait aux exportations et aux importations proviennent de l'Office national de l'énergie.

Les statistiques financières et d'exploitation sont tirées d'une enquête annuelle menée auprès des principaux services d'électricité au Canada. Le taux de réponse à cette enquête s'établi à plus de 95%. Par conséquent, l'imputation est minimale et il n'existe presque pas de distorsion découlant de la non-réponse.

Les données relatives à la puissance génératrice installée proviennent d'une enquête annuelle sur les services d'électricité et les établissements industriels qui possèdent au moins une usine et dont la capacité de production globale dépasse 500 KW. L'enquête est menée auprès d'environ 900 centrales d'énergie électrique. Pour obtenir d'autres renseignements, consultez la publication Centrales d'énergie électrique, no. 57-206-XPB au catalogue.

Les données diffusées dans la présente publication ne sont pas dépourvues d'un certain degré d'erreur, qu'il s'agisse d'écarts au niveau de l'interprétation des questions ou d'erreurs introduites en cours de traitement. Nous faisons des efforts raisonnables pour garantir que ces erreurs ne dépassent pas certaines limites acceptables, c'est-à-dire que nous soignons la conception du questionnaire, établissons la liaison avec les principaux répondants, vérifions les données pour en relever les incohérences et assurons le suivi subséquent et le contrôle de la qualité des opérations de traitement manuel. Selon notre expérience, les données contiennent rarement une erreur grave.

Glossary of Terms

Capability: The maximum that a station or equipment is capable of carrying under specific conditions.

Capacity: In the electric power industry, capacity has two meanings:

- System Capacity: The maximum power capability of a system. For example, a utility system might have a rated capacity of 5,000 megawatts, or might sell 50 megawatts of capacity (i.e. of power).
- Equipment Capacity: The maximum power capability of a piece of equipment. For example, a generating unit might have a rated capacity of 50 megawatts.

Cogeneration: The combined production of electricity and useful heat. Cogeneration is often employed at industrial plants where the heat produced can be utilized in the manufacturing processes and for general space heating.

Conventional Generation: Electricity that is produced at a generating station where the prime movers are driven by gases or steam produced by burning fossil fuels.

Electric Utility: An organization that, as its prime purpose, generates, transmits and/or distributes electric energy for sale.

Firm energy or power: Electrical energy or power intended to be available at all times during the period of the agreement of its sale.

Grid: A network of electric power lines and connections.

Hydroelectric Power: The production of electricity from the kinetic energy of falling water.

Installed Capacity: The capacity measured at the output terminals of all generating units in a station, without deducting station service requirements.

Interruptible Energy or Power: Energy or power made available under an agreement that permits curtailment or interruption of delivery at the option of the supplier.

Kilowatt (KW): The commercial unit of electric power; 1000 watts. A kilowatt can best be visualized as the total amount of power needed to light ten 100-watt light bulbs.

Glossaire des termes

Rendement optimum: Le niveau maximal d'électricité qu'une centrale ou un équipement est capable de transporter dans des conditions particulières.

Capacité: Dans l'industrie de l'énergie électrique, ce terme a deux significations:

- Puissance du réseau: La capacité maximale de livraison d'énergie d'un réseau. Par exemple, un service d'électricité peut avoir une capacité nominale de 5 000 mégawatts, ou encore il peut vendre 50 mégawatts de capacité (c.-à-d. de puissance)
- La puissance de transport de l'équipement: La capacité maximale de puissance qu'une certaine pièce de matériel est capable de transporter. Par exemple, un groupe de production d'électricité pourrait avoir une capacité nominale de 50 mégawatts.

Congénération: Production combinée d'électricité et d'énergie thermique. La congénération est souvent utilisée dans les usines où l'énergie thermique produite peut servir dans le contexte de processus de fabrication et pour chauffer les locaux.

Production classique: Électricité d'une centrale où la force motrice est de la vapeur d'eau ou des gaz d'échappement produits à partir de combustibles fossiles.

Entreprise publique de production d'électricité: Organisme dont l'objet principal est de produire, transmettre et (ou) distribuer de l'énergie électrique à vendre.

Puissance garantie: Puissance électrique disponible à tout moment pendant la période de l'entente.

Réseau: Réseau de conducteurs et de connections.

Énergie hydro-électrique: Production d'électricité à partir de l'énergie cinétique d'une chute d'eau.

Capacité installée: La capacité mesurée aux bornes de sortie de tous les groupes électriques d'une centrale, sans déduction des besoins de services de celle-ci.

Énergie interruptible: Énergie disponible en vertu d'une entente qui autorise la diminution ou l'interruption de la livraison au gré du fournisseur.

Kilowatt (KW): Unité commerciale d'électricité égalant 1000 watts, soit la quantité d'énergie requise pour allumer dix ampoules électriques de 100 watts.

Kilowatt Hour (KW.h): The commercial unit of electric energy; 1000 watt hours. A kilowatt hour can best be visualized as the amount of electricity consumed by ten 100-watt light bulbs burning for an hour. One kilowatt hour is equal to 3.6 million joules.

Load: The amount of electric power or energy consumed by a particular customer or group of customers.

Load Factor: The ratio of the average load during a designed period to the peak or maximum load in that same period. (Usually expressed in per cent.)

Megawatt (MW): A unit of bulk power; 1,000 kilowatts.

Megawatt Hour (MW.h): A unit of bulk energy; 1,000 kilowatt hours.

Nuclear Power: Electricity generated at an electric power plant whose turbines are driven by steam generation in a reactor by heat from the fission of nuclear fuel.

Peak Demand: The maximum power demand registered by a customer or a group of customers or a system in a stated period of time such as a month or a year. The value may be the maximum instantaneous load or more, usually the average load over a designated interval of time, such as one hour, and is normally stated in kilowatts or in megawatts.

Reserve Generating Capacity: The extra generating capacity required on any power system over and above the expected peak load. Such a reserve is required mainly for two reasons: (1) in case of an unexpected breakdown of generating equipment; (2) in case the actual peak load is higher than forecast.

Winter Peak: The highest load on a power system during the six-month period October to March. The winter peak almost always occurs in January or early February. Kilowattheure (KW.h): Unité commerciale d'énergie électrique égalant 1000 wattheures, soit la quantité d'électricité consommée par dix ampoules électriques de 100 watts pendant une heure. Un kilowattheure est égal à 3,6 millions de joules.

Charge: Quantité de puissance ou d'énergie électrique consommée par un client particulier ou un groupe de clients.

Facteur de charge: Coefficient de la charge moyenne pendant une période donnée sur la charge de pointe maximale au cours de la même période (habituellement exprimée en pourcentage).

Mégawatt (MW): Unité de puissance égale à 1 000 kilowatts.

Mégawattheure (MW.h): Unité de puissance égale à 1 000 kilowattheures.

Énergie nucléaire: Électricité produite dans une centrale électrique où la valeur actionnant les turbines provient de la chaleur dégagée par la fission atomique.

Demande de la pointe: Charge maximale consommée par un client, un groupe de clients ou un réseau pendant une période fixe, par exemple un mois ou un an. Il peut s'agir de la charge maximale installée ou, de façon plus habituelle, de la charge moyenne sur un intervalle court, une heure par exemple. Exprimée normalement en kilowatts ou en mégawatts.

Capacité génératrice de réserve: Capacité supplémentaire requise dans un réseau d'électricité, en sus de la charge de pointe prévue. Une telle réserve est requise pour deux raisons principales: (1) en cas de panne imprévue du matériel électrogène; (2) au cas où la charge de pointe réelle serait supérieure aux prévisions.

Pointe de consommation hivernale: S'entend de la plus forte charge qu'un système d'énergie doit assumer pendant la période de six mois allant d'octobre à mars. La pointe de consommation hivernale survient presque toujours en janvier ou au début de février.

MERCI DE VOTRE COMMANDE!

Do You Suffer from Information Overload?

The amount of information available to people whose jobs depend on educated decision-making has exploded. The truth is that making decisions with too much information can be even harder than making them with too little!

We Have a Cure!

Every Friday, Statistics Canada releases Infomat, our highly informative weekly review that sums up our major socio-economic reports. surveys and product releases. In only 10 pages, Infomat presents key information in short articles with easy-to-read charts and tables about:

- trade
- transportation
- · consumer prices
- GDP
- · travel and tourism
- · manufacturing

- · retailing and wholesaling · le commerce · le commerce de gros et de détail
- employment
- finance
- · and much more

- la fabrication
- le transport
- · l'emploi

Vous souffrez d'infobésité?

Aujourd'hui, la quantité d'information offerte aux personnes qui doivent prendre des décisions

éclairées dans leur travail est tout simplement

phénoménale. Une surabondance d'information

peut rendre la prise de décisions encore plus

difficile qu'une carence en information!

Nous avons l'antidote!

Le vendredi, Statistique Canada publie

Infomat, notre bulletin hebdomadaire

hautement informatif où sont résumés nos

- · la finance
- · et plus encore

Invest just 10 minutes a week with Infomat

When you get information from Infomat, it hasn't been manipulated or massaged. It gives you the straight facts-sometimes surprising, always precise and up-to-date! In about 10 minutes, you can gain a precise understanding of the latest social and economic developments in Canada.

Infomat is available every week on the Statistics Canada Web site (Catalogue No. 11-002-XIE) and in paper (Catalogue No. 11-002-XPE). Download it yourself every Friday, or have us send it to you-the choice is yours!

Unzip Infomat on line! The Internet version is available for \$109 per year (plus taxes, where applicable) at www.statcan.ca/cgi-bin/downpub/subscribe.cgi?catno=11-002-XIE

Save 20% on a 2-year subscription or 30% on a 3-year subscription

There are 5 easy ways to order the print version of Informat (\$145 per year). In Canada, please add either GST and applicable PST or HST. Shipping charges: No shipping charges for delivery in Canada. For shipments to the United States, please add \$300. For shipments to other countries, please add \$500.

CALL: 1 800 267-6677 or (613) 951-7277 FAX: 1 877 287-4369 or (613) 951-1584 MAIL: Statistics Canada, Dissemination Division,

Invest in Canadian Economic Observer and get immediate returns and long-term benefits!

Accurate data and insightful analysis are the hallmarks of sound decisions and successful business practices. They are also hallmarks of *Canadian Economic Observer (CEO)*.

Value for Money — Every Month

Each month you will receive **CFO** 's two-part briefing package on the economy.

Part One is in an easy-to-read magazine format filled with data and analysis, supported by tables and charts. Every issue contains:

- a summary table of current economic conditions
- concise sector-by-sector analysis of economic indicators
- be developments in provincial as well as international economies
- highlights of economic events at home and abroad
- one or more feature articles spotlighting major issues or industry sectors

Part Two is a separate companion volume — *The Statistical Summary*:

- hard numbers in tabular form on markets, prices, industrial sectors, trade competitiveness and much more
- more than 1,100 economic indicators
- monthly data for the calendar year in review
- user-friendly tables and graphs

Satisfaction Guaranteed!

- As a subscriber, you'll be connected to Statistics Canada's economic analysts answers to your questions related to either data or feature articles contained in *CEO* are just a phone call away.
- Discounts for multi-year subscribers and as a bonus for subscribing, we'll give you a copy of CEO's annual Historical Statistical Summary.
- Subscribing to CEO is a risk-free investment! At any time and for any reason, you may cancel your subscription and receive a refund on all undelivered copies...no questions asked.

Start your subscription today!

Prove to yourself that an investment in data will pay off handsomely.

Subscribe to the Canadian Economic Observer (Catalogue No. 11-010-XPB) TODAY for only \$227. In Canada, please add either CST and applicable PST or HST. Shipping charges: No shipping charges for delivery in Canada. For shipments to the United States, please add \$72. For shipments to other countries, please add \$120. CALL TOLL-FREE 1 800 267-6677 or FAX 1 877 287-4369. You can also MAIL your order to: Statistics Canada, Circulation Management, Dissemination Division, 120 Parkdale Ave., Ottawa, Ontario, K1A 0T6, Canada or contact your local Statistics Canada Regional Reference Centre listed within this publication.

Investissez dans *L'Observateur* économique canadien et profitez de retombées immédiates et d'avantages à long terme!

Des données exactes et des analyses perspicaces font la force de bonnes décisions et de pratiques d'entreprise fructueuses. Elles font aussi la force de *L'Observateur économique* canadien (L'OÉC).

De l'argent bien placé – tous les mois

Chaque mois, vous recevrez la trousse d'information à deux volets sur l'économie de *L'OÉC*.

La **première partie** est un magazine facile à lire, rempli de données et d'analyses appuyées de tableaux et graphiques. Chaque numéro renferme :

- un tableau sommaire de la conjoncture économique
- une analyse concise par secteur des indicateurs économiques
- les développements intervenus dans les économies provinciales et internationales
- les faits saillants d'événements économiques observés au pays et à l'étranger
- au moins un article vedette sur de grandes questions ou des secteurs de l'industrie

La **deuxième partie** est une publication d'accompagnement distincte intitulée *Aperçu statistique* :

- b des chiffres sous forme de tableaux sur les marchés, les prix, les secteurs industriels, la compétitivité dans le monde des affaires et bien plus encore
- plus de 1 100 indicateurs économiques
- des données mensuelles pour l'année civile à l'étude
- des tableaux et graphiques faciles à utiliser

Satisfaction garantie!

- ▶ En tant qu'abonné, vous serez en contact avec les analystes économiques de Statistique Canada. Pour obtenir des réponses à n'importe quelle de vos questions sur les données ou les articles vedettes de L'OÉC, vous n'avez qu'à nous appeler.
